

Danish North Sea exploration well completed, Siri-6

As operator for the companies in Licence 6/95 DONG E&P A/S has drilled the Siri-6 (/20-10) exploration well about 4 kilometres west of the Siri field in the Danish part of the North Sea.

Siri-6 was drilled as a vertical well and reached its total depth at metres below mean sea level in chalk of Danian age. The well encountered reservoir sandstone in the Paleo-cene, but no hydrocarbon discovery was made. Coring and logging was carried out for further evaluation of the well results.

The well was spudded 21 December with the jack-up rig Mærsk Resolute at the position 56°28' 51.82" N; 4°50' 51.82" E (UTM zone 31; 6,261,282.14 N; 613,444.98 E), where the water depth is 61 metres. The well is now being plugged and abandoned.

As not all the companies in licence 6/95 wanted to participate in the well, Siri-6 was drilled as a sole risk operation. The table below shows the companies' shares in the Siri-6 well and in the licence.

Company

Share in well (%)

Share in licence (%)

DONG E&P A/S

71.

50.

Altinex Oil Denmark A/S (Noreco)

28.

20.

Siri (UK) Limited

30.

The jack-up Mærsk Resolute will subsequently be moved to the Nini field.
