## Document Issue Record

Document Preparation : D Shillitto – Work Package C - Project Manager

E. Kaplan – Deputy Project Manager

Document Review and Approval : A. Padwalkar – Project Manager

- The definitive copy of this document is held in Fugro's information system
- Document distribution is restricted to project participants approved by the client
- The Issue number of this document is shown on the Document Control page presented immediately after the title page of this document; some (unchanged) pages and plates can show a lower issue number

## Executive Summary

Following a decision in the Danish Parliament, Denmark is on the path to establish multiple offshore wind farms in the Danish sectors of the North Sea, Kattegat, and the Baltic Sea. The offshore wind farms will provide offshore energy to the Danish mainland and neighbouring countries.

The offshore part of the project in the North Sea includes the following:

- Multiple offshore wind farms;
- Offshore platforms for substations;
- Subsea cables between offshore wind farms and the Danish mainland.

Energinet Eltransmission A/S has requested Fugro to perform a geotechnical site investigation for the North Sea 1 offshore wind farm area. The planned developments are located in the Danish sector of the North Sea, approximately 20 km off the west coast of Jutland, Denmark. The investigation area is divided into two subareas (Subarea 1 and Subarea 2). The geotechnical site investigation intends to provide relevant geotechnical data to improve the geological and geotechnical understanding of the area, and to support the design and installation requirements for the planned offshore wind farms.

The various site phases of the geotechnical investigation include seafloor in situ testing, geotechnical borehole drilling with downhole sampling, downhole in situ testing, borehole geophysical logging, and offshore geotechnical laboratory testing. An office programme of geotechnical laboratory testing and reporting of results follows the site phase.

This report presents the operations and calibration records of the seafloor and downhole scope conducted by Excalibur in Subarea 1, between 28 April and 25 June 2024. Water depths at the investigated locations, range from approximately 17 m to 20 m reduced to mean sea level.

# 1. Introduction

Energinet Eltransmission A/S (Energinet) are performing a large number of site investigations in preparation for development of the Danish offshore wind farm (OWF) 2030 project in the North Sea. Energinet has contracted Fugro to perform a geotechnical site investigation for the developments of the North Sea 1 offshore wind farm area. The planned developments are situated in the Danish sector of the North Sea, approximately 20 km off the west coast of Jutland, Denmark.

The purpose of this geotechnical site investigations is to gather geotechnical data and information as basis for:

- Development of 3D ground models, integrating the results of the geotechnical investigations and the geophysical surveys,
- Evaluation of possibilities to jack up on the seafloor when installing wind turbines,
- Preliminary engineering site assessments,
- General risk assessments for foundation conditions of the wind farms.

This document comprises the operations and calibration records of the seafloor and downhole scope performed by Excalibur, not included in and supplementing the 'Geotechnical Site Investigation Results Subarea 1' (F217703-03, F217703-04).

The operations and calibration records of the seafloor and downhole scope performed by MV Normand Mermaid, Fugro Voyager and Gargano will be covered in separate documents (F217703-01-OPS-NMM, F217703-02-OPS-VOY and F217703-03-OPS-GAR, respectively).

## 1.1 Geotechnical Survey Objectives with Excalibur

The aim of the offshore geotechnical survey was providing the soil types and geotechnical properties of the soil units down to 70 m below seafloor (BSF).

The geotechnical part of the survey with Excalibur included the following:

- 16 CPT testing of the seafloor to target depth 55 m BSF.
- 6 geotechnical boreholes to a target depth of 70 m BSF.
- 2 geotechnical boreholes including blind drilling from seafloor to refusal depth of the seafloor CPT and downhole CPT to target depth 55 m BSF.

## 1.2 Detailed Site Information

### 1.2.1 Location

Figure 1.1 presents a project location map.

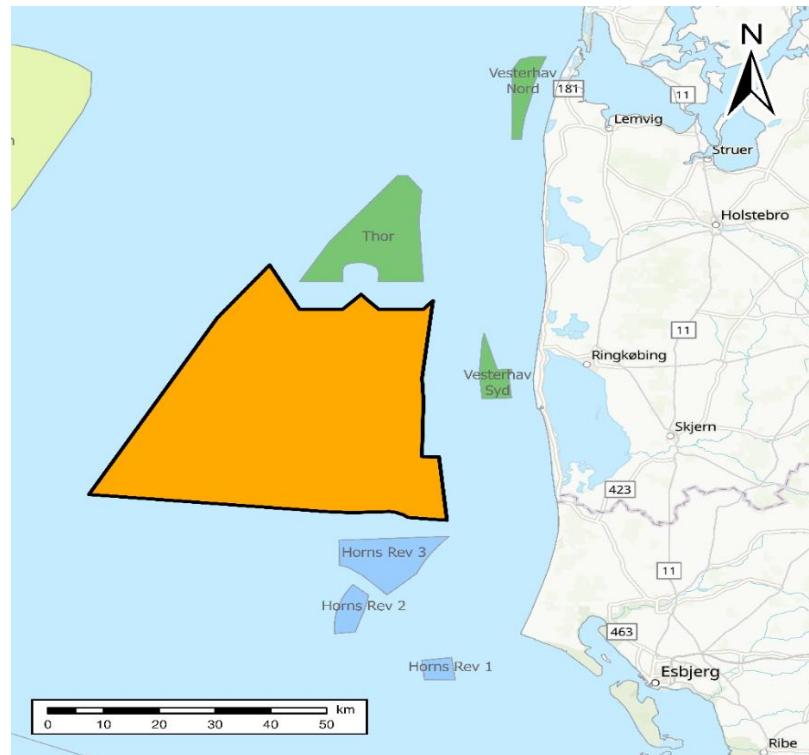

Figure 1.1: North Sea 1 (LOT 2) site in orange shown with neighbouring wind farms either operational (blue) or under construction (green)

## 1.2.2 Area of Investigation: LOT 2 Site

### 1.2.2.1 Description

The investigation area covers 2200 km<sup>2</sup> and is divided into two sub-areas: Subarea 1, covering 1420 km<sup>2</sup>, and Subarea 2, covering 796 km<sup>2</sup>. The water depths range between 10 and 40 meters mean sea level (MSL).

Approximately 3.5 percent of the project scope falls within the 12 nautical mile (NM) zone. None of the locations in the 12 nm zone were under Excalibur's scope.

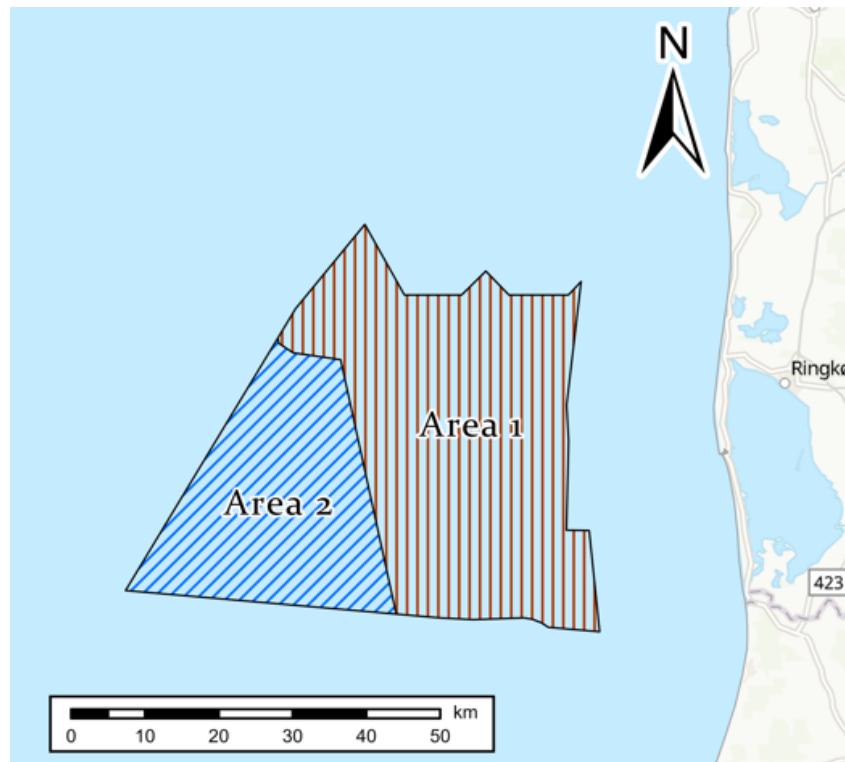

Figure 1.2: Sub-area distribution for the LOT 2 area

### 1.3 Geospatial Information, Vertical, Horizontal Control and Positioning

Table 1.1 presents the project geodesy and Table 1.2 presents the validation calculation.  
(Refer to Appendix D.3 Positioning Survey Equipment Calibration for details)

## 1.4 Scope of Report

The information presented in this report relates to operational details of the site investigation, as follows:

- Milestone Certificates,
- Data acquisition calibration records for the positioning systems,

- Recovery Lists,
- Calibration Certificates,
- Positioning Data,
- Health, Safety and Environment performance.

## 1.5 Project Responsibilities and Use of Report

This document presents information according to a project specification determined and monitored by Energinet Eltransmission A/S.

Fugro understands that this report will be used for the purpose described in this Main Text section. That purpose was a significant factor in determining the scope and level of the services. Results must not be used if the purpose for which the report was prepared or the client's proposed development or activity changes. Results may possibly suit alternative use. Suitability must be verified.

## 2. Operations

### 2.1 Mobilisation and Calibrations

From now on, Excalibur Jack-Up will be referred to as "Vessel" in the report. Vessel mobilization was completed on 18 April 2024 in Holyhead, UK. Mobilisation was conducted in port and details of this are outlined in the Excalibur mobilisation report (Document No. F217703-MOB-01B). Appendix A.1 presents signed copies of the milestone certificates. After the completion of mobilization, Excalibur was towed from Holyhead and jacked up at the North Sea 1 area on 28 April 2024.

The survey equipment supplied in the frame agreement was mobilised on the Excalibur prior to the start of this project. Dimensional control survey of the installed sensors and series of alongside checks and calibrations were undertaken between 8 and 9 March 2024, while the Excalibur JUB was alongside Holyhead.

Positioning Survey Mobilisation and Calibration report for Subarea 1 is presented in Appendix D.4.

Excalibur offsets have been provided in Table 2.1 and a corresponding offset diagram in Figure 2.1.

Table 2.1: Excalibur Offsets

Description	X [m] + STBD	Y [m] + FWD	Z [m] +UP	Notes
Moonpool 1 CRP	0.00	0.00	0.00	Common Reference Point, deck level

### 2.1.1 Navigation and Vertical Control

Table 2.2: Vessel Navigation and Vertical Control

Vessel Navigation and Vertical Control	
Requirement	<ul style="list-style-type: none"> <li>■ The horizontal and vertical uncertainty of the vessel position shall be less than 0.5 m. The accuracy of the horizontal positioning shall be better than 0.2 m for 95% of time (<math>2\sigma</math>).</li> <li>■ Horizontal: The horizontal position of borehole and CPT locations shall be determined with an accuracy better than 0.5m.</li> <li>■ The elevation of the seabed at the investigation positions shall be determined with an accuracy better than 0.1m.</li> </ul>
Equipment	<ul style="list-style-type: none"> <li>■ Primary Positioning System: 2x Starfix.G4+ signal;</li> <li>■ Secondary Positioning System: 2x Starfix.GNSS signal (Starfix.XP2/HP);</li> <li>■ Heading: 1x StarPack SP1 ProTrack vector heading system</li> <li>■ Navigation Software: Starfix NG.</li> </ul>
Data Collection	<ul style="list-style-type: none"> <li>■ All global navigation satellite system (GNSS) positions were acquired in geographic coordinates relative to the World Geodetic System 1984 (WGS84) datum.</li> <li>■ Fugro navigated and positioned the Excalibur to the intended positions given by the client.</li> <li>■ Two StarPack GNSS receivers were used for the surface positioning during the project. All depth measurements were reduced to MSL. Real-time GNSS tides were used throughout the project.</li> </ul>

<b>Vessel Navigation and Vertical Control</b>	
	<ul style="list-style-type: none"> <li>■ All positions and peripheral data were sent to the navigation computer which calculated the various offset's positions in the local geodesy and projection, ETRS89 / UTM zone 32N (EPSG:25832), ITRF2014 to ETRS89 (FUGRO::41366). (refer to Appendix B.4 for positioning report)</li> </ul>

## 2.2 Equipment

### 2.2.1 Drilling Equipment

A Fraste CompactRotoSonic (CRS) XL170 MAX DUO drill rig deployed on 'Fugro Excalibur' was used for drilling and downhole sampling activities. The rig has a pull down force capacity of 50 kN (with sonic mode active) or 55 kN. A single-wall core barrel was used to recover samples using the sonic drilling capability of the drill rig. Various types of Shelby tubes for push sampling were selected accordingly to ensure sample quality. Rotary coring was carried out using the Geobor S triple walled coring system with plastic core liners. Various drill bits were provided and core catchers/lifters were supplied for use in sampler tubes and core barrels as required.

### 2.2.2 Top Push CPT System

A jacking unit comprising a pair of hydraulic rams with a thrust capacity of 20 tonnes is mounted on a removable beam attached to a CR2 marine derrick positioned over the moonpool.

CPTs were performed using Fugro Deepcone® piezocone penetrometers with an approximate tip area of 1500 mm<sup>2</sup>. The Fugro Deepcone® is a heavy-duty piezocone penetrometer designed to enhance penetration capacity. The jacking unit is used to lower/push the cone in 1 m increments by adding sections of 25.5 mm hollow stem rod at deck level. The jacking unit pushes the cone at a rate of 2 cm/s.

### 2.2.3 WISON® Deep Line System

The WISON® Deep Line tool comprises a hydraulic jacking unit with 36 mm OD push rod. The tool is lowered on a hydraulic-electric umbilical via a sheave mounted over the moonpool on a CR2 marine derrick and latches into Geobor S drill pipe. The tool provides a 1.5 m stroke and a thrust capacity of 100 kN which ensures the cone is pushed into the soil at a constant rate of 2 cm/s.

CPTs were performed using standard piezocone penetrometers with an approximate tip area of 1000 mm<sup>2</sup>.

## 2.3 Vessel Details

### 2.3.1 Excalibur

The Excalibur Barge is a Fugro owned and operated barge adapted to specialist geotechnical investigation. The vessel uses a crane to efficiently deploy various systems through the moonpool.

A total of 40 bunks are available on this vessel. Survey offsets were determined during vessel mobilisation.

Figure 2.2: Excalibur

Table 2.3 below shows the Excalibur vessel characteristics.

Table 2.3: Vessel Details – Excalibur

Vessel	Excalibur (24 Hrs)
Length	90.1 m
Beam	20.5 m
Gross Tonnage	5528 ton
Draught	7 m
Legs	8
Transit speed	Up to 5 knots

### 3. Field Procedures

#### 3.1 Summary of Events

The work covered under the contract comprises a combination of seafloor in situ testing and downhole sampling onboard the Excalibur, and downhole sampling and in situ testing spread over multiple separate vessels, namely and Fugro Voyager, Gargano and MV Normand Mermaid.

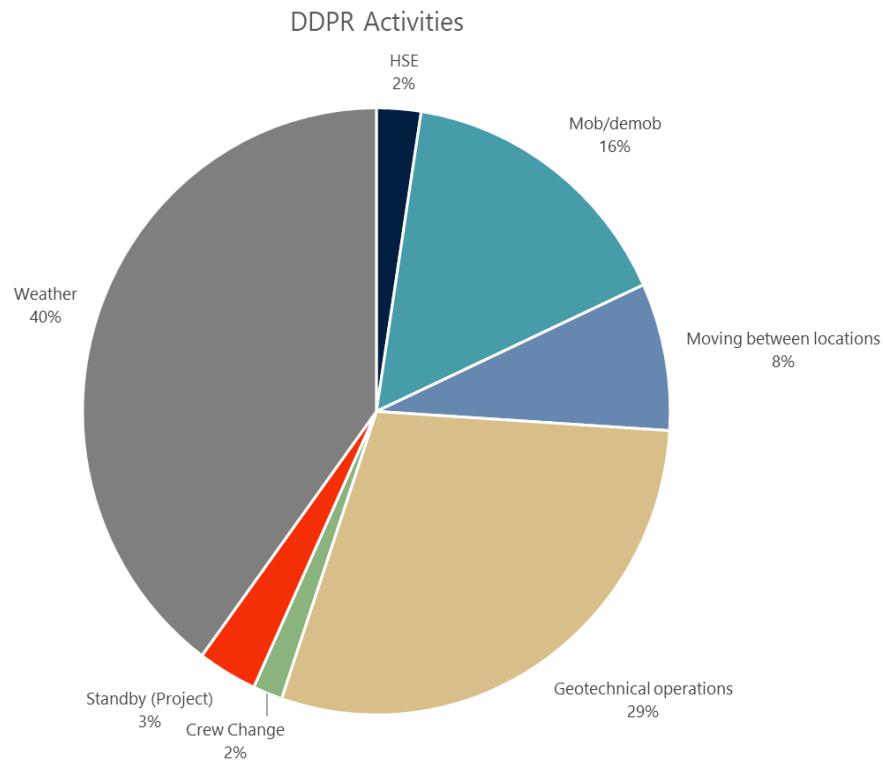

Seafloor In situ testing and downhole sampling operations with Excalibur for the Danish offshore wind farm (OWF) 2030 project commenced on 30 April 2024. Survey operations were run on a 24-hour operational basis with data being QC'd and processed offshore. Geotechnical operations were completed on 25 June 2024. The vessel transmitted to Great Yarmouth for demobilisation.

A summary of key events has been provided in Table 3.1, a break-down of geotechnical operational time (days) for Excalibur is provided in Figure 3.1.

Table 3.1: Summary of Key Events (Geotechnical)

Event	Dates
Mobilisation of Excalibur (Holyhead, UK)	08-09 March 2024
Towing from UK to North Sea 1 - Subarea 1	18 April – 24 April 2024
Commencement of Geotechnical operations in Subarea 1	30 April 2024
Completion of Geotechnical operations in Subarea 1	25 June 2024
Activity	Days
HSE	1.7
Mob/demob	11.0
Moving between locations	5.5
Geotechnical operations	20.5
Crew Change	1.1
Standby (Project)	2.3
Weather	27.9
HSE	1.7

Figure 3.1: Excalibur project breakdown (%days)

### 3.2 Work Package C – Excalibur

Fieldwork operations onboard the Excalibur were performed between 30 April 2024 and 25 June 2024. Data was processed onboard and preliminary results for individual locations were issued to the onboard client representative. Daily progress reports (DPRs) were issued daily during the mobilisation of the fieldwork and during execution of the scope of work.

The work scope performed by Excalibur in Subarea 1 comprises of:

- 16 CPT testing of the seafloor to target depth 55 m BSF.
- 6 geotechnical boreholes to a target depth of 70 m BSF.
- 2 geotechnical boreholes including blind drilling from seafloor to refusal depth of the seafloor CPT and downhole CPT to target depth 55 m BSF.

Table 3.2: Geotechnical Scope of Work

Scope	Tendered Number	Acquired Number
Subarea 1 - CPT	20	16
Subarea 1 - BH	6	6
Subarea 1 – DTH CPT	2	2
1 BH and 4 CPT locations have been removed from Excalibur scope (exc. bird protection zone, locations with shallow gas risk)		

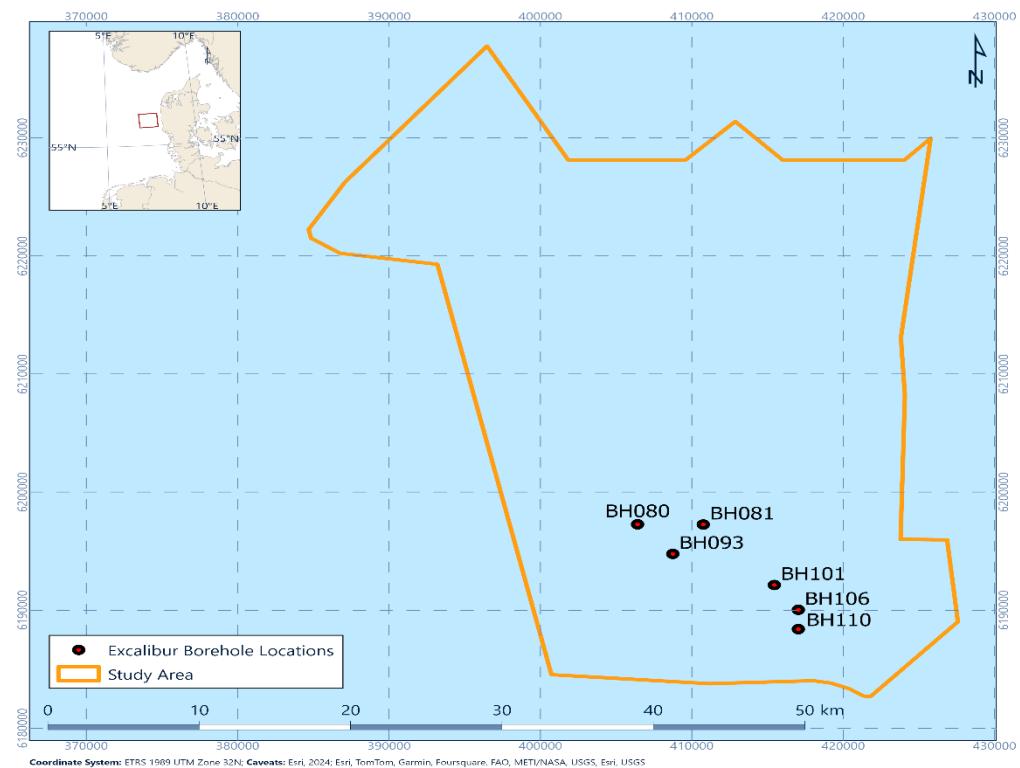

Figure 3.2: Completed BH locations with Excalibur

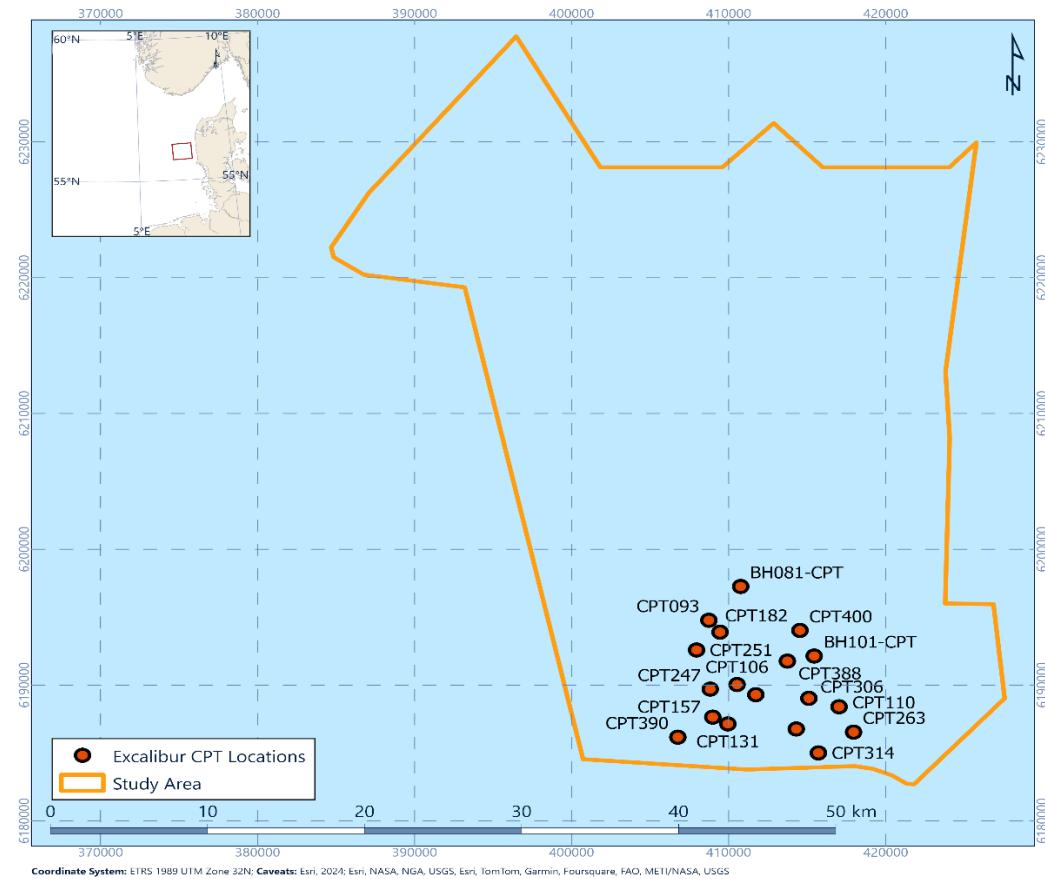

Figure 3.3: Completed CPT locations with Excalibur

The below table illustrates the components of the Work Package C – Excalibur (Fieldwork Phase – Seafloor and Downhole) scope.

Table 3.3: Work Package C – Excalibur methodology

Item	Description
Scope	<ul style="list-style-type: none"> <li>• Six geotechnical boreholes including downhole sampling to target depth of 70 m below seafloor (BSF);</li> <li>• Sixteen seafloor CPT testing to a target depth of 55 m BSF;</li> <li>• Two borehole locations including blind drilling from seafloor to refusal depth of the seafloor CPT and downhole CPT to target depth 55 m BSF.</li> </ul>
Methodology	<p>Once the vessel is on location a flanged 10" conductor casing is deployed through the moonpool. A 7" casing is then deployed and is advanced during drilling to prevent borehole collapse in the overburden strata. Downhole drilling is performed using either sonic sampler deployed on 3" hollow rods or rotary drilling using Geobor S pipe with a wireline core barrel or non-coring device. Drilling fluid comprising seawater or seawater with a polymer additive is used. A selection of drill bits is supplied to cope with the expected range of possible soil conditions.</p> <p>Upon completion of a borehole, the pipes withdrawn.</p> <p>Boreholes will be positioned within a 5 m radius of the target coordinates. Boreholes will be located at least 3 m away from supplied centre coordinates of seafloor in situ testing investigation locations of Subarea 1. In case an obstruction is encountered on the seafloor the borehole location will be repositioned as close to the target coordinates as possible with client approval.</p> <p><b>Downhole Sampling</b></p> <p>Downhole sampling will be performed using a Fraste CRS XL170 MAX DUO drill rig and either sonic sampling, push sampling (top push and wireline) or rotary coring methods depending on ground conditions.</p> <p>Sonic sampling is carried out in coarse-grained cohesionless soils using either a single-wall or dual-wall core barrel deployed on 3" hollow rods. Continuous sampling of at least Quality class 4, typically Quality class 3 (CEN ISO 22475-1 (or equivalent)), can be achieved with two approximately 1.5 m samples for every 3.05 m length of casing advanced. 7" casing is advanced with the sonic sampler. Ground penetration is achieved using self-weight of the sampler barrel and rods, and the rig pull down force of up to 50 kN combined with sonic vibration of up to 150 Hz. Plastic core catcher is used to prevent sample loss during retrieval of the sampler barrel. Sample is extruded from the barrel into a purpose-built sample trough using the self-weight of the sample and sonic vibration from the rig.</p> <p>Rotary coring is carried out using the Geobor S triple-tube coring system in competent ground such as stiff or very stiff cohesive soil or rock. Continuous core samples of up to 102 mm diameter and 1.5 m length can be recovered. Geobor core barrel is loaded with clear plastic liner and various fingered and non-fingered core lifters are available to use. The core lowered on a winch wire through the Geobor drill pipe until it latches into the bottom of the pipe. The borehole is then advanced using the rotary drilling mode of the rig. The core barrel is retrieved to deck and after the core retainer is removed from the barrel the liner containing the core is extracted and handed to the geotechnical engineer for processing. Where recovery is less than 90% the following core run length will be reduced by half to recover dropped core and improve recovery. Where recovery does not improve the run length will be reduced again to a minimum of 0.5 m.</p> <p>Push sampling is carried out where recovery of high quality fine-grained cohesive soil is required. When the drill string is setup for sonic drilling the push sampler tube is deployed on the end of a string of 3" hollow rods, when setup for rotary drilling the</p>

Item	Description
	<p>sample tube is attached to a wireline latching tool that is lowered on a winch wire until it latched into the bottom of the Geobor drill pipe. Ground penetration is achieved using the self-weight of the sampler and rods / drill pipe combined with the rig pull down force of up to 55 kN. The connector between the sampler tube and the rods or wireline latching tool incorporates a non-return valve. After the borehole has been advanced to the required test level, it is cleaned by mud flushing. A range of thin-walled and thick-walled Shelby tubes will be supplied for use as sampler tubes. These are to be without core catchers for fine-grained cohesive soils and equipped with a core catcher for coarse-grained cohesionless soils. Push sample tubes have a 3 inch outer diameter (OD). For use in very dense granular soils, where 3 inch OD tubes have been unable to achieve the necessary recovery, tubes of 2 inch OD are available. Types of Shelby tubes will be selected accordingly to ensure sample quality. In fined grained soils intact soil samples of at least Quality class 2 (CEN ISO 22475-1 (or equivalent)) will be taken, where possible. In coarse grained soils intact soil samples of at least Quality class 4 (CEN ISO 22475-1 (or equivalent)) will be taken.</p> <p>Push samples will be acquired in intervals of 1.0 m. While sampling cohesive soil material minimum required recovery is 0.3 m. If recovery less than 0.3 m is acquired, a 0.5 m drill-out will follow.</p> <p><b>Offshore Laboratory Testing</b></p> <p>Recovered samples are handled and processed in the offshore laboratory. The various stages that are scheduled to be performed on-site include:</p> <ul style="list-style-type: none"> <li>• On-deck removal of sample tube from sampler;</li> <li>• Measurement of sample recovery in the sample tube;</li> <li>• Transfer of the sample tube to the site laboratory;</li> <li>• Sample extrusion or liner cutting;</li> <li>• Laboratory testing, e.g. sample photography, sample description/ classification and other laboratory testing (refer to Section 'Site Laboratory Testing' for details);</li> <li>• Selection and labelling of geotechnical sample sections for undisturbed preservation and/or disturbed preservation: <ul style="list-style-type: none"> <li>– undisturbed sample sections wrapped in aluminium and plastic foil, and waxed into labelled cardboard tubes;</li> <li>– disturbed sample sections placed in double set of labelled plastic bags.</li> </ul> </li> <li>• Placement in labelled shipping container (sample box);</li> <li>• Storage of shipping containers in onboard storage area with a storage temperature between +5 °C and +10 °C and protected from direct sunlight;</li> <li>• Transfer of shipping containers from geotechnical drilling vessel.</li> </ul> <p>The following laboratory testing is scheduled to be performed on site:</p> <ul style="list-style-type: none"> <li>• Soil classification and description of samples in general accordance with Larsen et. al.(1995);</li> <li>• Photography of complete sample (intact and split) and selected sample sections for detailed photography;</li> <li>• Geotechnical index testing: <ul style="list-style-type: none"> <li>– water content and unit weight (unit weight derived from volume-mass calculation and water content measurements)</li> <li>– carbonate content – HCl reaction</li> </ul> </li> <li>• Strength index testing (where applicable): <ul style="list-style-type: none"> <li>– Torvane;</li> </ul> </li> </ul>

Item	Description
	<ul style="list-style-type: none"> <li>– Pocket Penetrometer;</li> <li>• Unconsolidated Undrained triaxial compression testing (where applicable)</li> </ul> <p><b>Top Push In Situ Testing</b></p> <p>Top push CPTs will be performed using deck-mounted Geomil GB19 rams with a nominal thrust capacity of 20 tonnes of force and quasi-continuous stroke length in increments of 1 m.</p> <p>Once on position a flanged 10" conductor casing is set in the seabed to a depth appropriate for the ground conditions and anticipated wave and current loading. Then 7" casing and Geobor drill pipe are lowered to seabed, these may be advanced by mud flushing to the penetration depth of the 10" casing if the sediment plug inside the 10" casing may cause early refusal of the CPT. 3.5" OD hollow HWY rods are lowered to just above the tip of the Geobor drill pipe. Together these drill string elements provide centralisation and lateral support for the CPT rods. Once the drill string elements are secured in the deck clamps the top push rams are craned into position over the moonpool and the CPT operator sets up the cone for the test. The cone is lowered to the bottom of the borehole using the rams by adding 1 m lengths of 25.5 mm OD rods. Once the cone is at seabed level the operator initiates the recording phase for the push and further rod lengths are added to push the cone into the soil at a rate of 20 mm/s.</p> <p>Top push CPT will be performed using Fugro Deepcone® peizocone penetrometers with a 15 cm<sup>2</sup> cone area. Throughout the test, measurements of cone resistance, sleeve friction, pore pressure and inclination are displayed graphically on the operators control panel. These data are simultaneously recorded. The test is terminated when target penetration depth is reached or the limiting trust capacity of the rams is reached. The test can also be terminated at any time at the discretion of the operator in case the safety of the operation or damage to equipment are at stake.</p> <p>After termination the cone is extracted and raised to deck level by operating the rams and removing rod sections in reverse. Finally, the rams are removed off of the moonpool and the rig is used to remove the HWY rods. If a subsequent CPT push is required, then a non-coring device is lowered through and latched into the Geobor drill pipe. The borehole is then drilled to the next test depth. The non-coring device is removed, and the HWY rods and rams are setup for the next push.</p> <p>Top push in situ testing will be performed according to ISO 19901-8:2014 (ISO, 2014). Performed CPTs should be as minimum classified as Class 2 according to ISO (2014). Maximum allowable data gap between pushes is 0.5 m.</p> <p>The following top push CPT termination criteria apply:</p> <ul style="list-style-type: none"> <li>■ As instructed by client;</li> <li>■ Reaching maximum stroke length;</li> <li>■ Reaching maximum capacity of the thrust machine, and/or measuring sensors, typically: <ul style="list-style-type: none"> <li>• 20 tonnes of force applied by the GB19 rams;</li> <li>• Cone resistance reaches 100 MPa;</li> <li>• inclination is more than 3° in 1 m, inclination is more than 10° over the entire penetration length;</li> </ul> </li> <li>■ Risk of damage to apparatus or safety of personnel, at discretion of equipment operator or as determined by software algorithms.</li> </ul> <p><b>Downhole In Situ Testing</b></p> <p>Downhole CPTs will be performed using a Fugro WISON® Deep Line system consisting of a wireline downhole jacking unit with a 1.5 m stroke and a thrust capacity of 100 kN.</p> <p>After the borehole has been advanced to the required test level, it is cleaned by mud flushing. The tool is lowered by its umbilical cable to the bottom of the drill pipe, where it seats just behind the drill bit and latches under its own weight. The test sequence is then activated from a surface control cabin and the cone penetrometer is pushed into</p>

Item	Description
	<p>the soil by pressurizing the umbilical at a constant rate of 20 mm/s. Throughout the test, measurements of cone resistance, sleeve friction and pore pressure are displayed graphically on the operator's control panel. These data are simultaneously recorded.</p> <p>CPTs will be performed using cone penetrometers with a 10 cm<sup>2</sup> cone area and a nominal stroke length of 1.5 m. Upon reaching the maximum achievable stroke, or the limiting thrust capacity of 100 kN, the test is terminated, and the system depressurised. The test can also be terminated at any time at the discretion of the operator in case the safety of the operation or damage to equipment are at stake. The drill string is lifted to extract the cone penetrometer and test rod from the ground and the WISON® unit is retrieved. Downhole in situ testing will be performed according to ISO 19901-8:2014 (ISO, 2014). Performed CPTs should be as minimum classified as Class 2 according to ISO (2014). Maximum allowable data gap is 0.5 m.</p> <p>The following downhole CPT termination criteria apply:</p> <ul style="list-style-type: none"> <li>■ As instructed by client;</li> <li>■ Reaching maximum stroke length;</li> <li>■ Reaching maximum capacity of the thrust machine, and/or measuring sensors, typically: <ul style="list-style-type: none"> <li>• Total thrust of 100 kN;</li> <li>• Cone resistance reaches 80 MPa (10 cm<sup>2</sup> cone), 100 MPa (5 cm<sup>2</sup> cone) or 100 MPa (heavy duty 5 cm<sup>2</sup> cone);</li> <li>• Sudden increase of inclination more than 3° per stroke;</li> </ul> </li> <li>■ Risk of damage to apparatus or safety of personnel, at discretion of equipment operator or as determined by software algorithms.</li> </ul> <p>Operations are conducted on a continuous basis, 24 hours per day, and 7 days per week.</p>

## 4. Health, Safety and Environment

Fugro performed the geotechnical operations with high regard for health and safety and the environment. A health, safety and environmental plan was completed prior to the start of the project operations (refer to F217703-PEP-Vol4\_HSSE Plan and 219660-Environmental Management Plan). This was produced in accordance with the company's Health Safety and Environmental Management System manual. All survey and crew members were required to read and sign this plan, to ensure they understood the work to be performed and the mitigating measures employed to minimise the identified risks.

During mobilisation and at regular intervals thereafter, safety briefings and toolbox talks were conducted to reiterate the risks relating to survey operations and steps taken to minimise these risks. A full safety briefing was also undertaken after each crew change. Further details have been provided in Table 4.1.

Table 4.1: Summary of HSE

Meeting	Number
Vessel Kick off meeting	1
Two-part HIRA	1
Vessel Inductions	56
Vessel Drills	15
Cross department tours	13
Sound Bite Training	2
Pre-shift meeting	114
Toolbox talks (TBT)	119
Hazard Observation Cards (HOC)	124
Vessel Safety Meetings	2
Audits / inspections	0
Incidents	1

All crew were required to wear coveralls, hardhats, safety boots, safety glasses, and gloves for all deck operations.

During operations a hazard observation card (HOC) system was operated on board allowing crew to report unsafe acts, unsafe conditions, safe acts, or make HSE suggestions. In total 124 HOCs were submitted.

The incidents and quality events reported during the project have been listed in Table 4.2.

Table 4.2: Summary of Project Related Incidents and Quality Events

Table 2: Geodetic parameters

Name: ETRS89 / UTM zone 32N [ETRF2000-ITRF2014][2023],DTU21 MSS height [DTU21 MSS]		
EPSG Code	EPSG:25832	
Global Navigation Satellite System (GNSS) Geodetic Parameters*		
Datum	International Terrestrial Reference Frame 2014	EPSG:1165
Ellipsoid	GRS 1980	
Semi major axis	a = 6 378 137.00 m	
Inverse flattening	1/f = 298.257222101	
Local Geodetic Datum Parameters		
Datum	European Terrestrial Reference System 1989	EPSG:6258
Ellipsoid	GRS 1980	
Semi major axis	a = 6 378 137.00 m	
Inverse flattening	1/f = 298.257222101	
Datum Transformation Parameters from ITRF2014 to ETRS89		
X-axis translation 0.056 m	X-axis rotation -0.002754"	Scale difference 0.00355 ppm
Y-axis translation 0.0535 m	Y-axis rotation -0.01666"	Coordinate Frame rotation
Z-axis translation -0.0988 m	Z-axis rotation 0.026928"	FUGRO:41366
Local Projection Parameters		
Map projection	Transverse Mercator	
Grid system	UTM zone 32N	EPSG:16032
Latitude origin	00° 00' 00.000" N	
Central meridian	009° 00' 00.000" E	
Scale factor on central meridian	0.9996	
False easting	500 000 m	
False northing	0 m	
Project Vertical Parameters		
Vertical coordinate reference system	DTU21 MSS height	FUGRO:41088
Datum	DTU21 MSS height	FUGRO:40943
Transformation	WGS 84 to DTU21 MSS height	FUGRO:41478
Notes		
* The geodetic datum of Fugro's global GNSS correction data is ITRF2014, epoch 2023 (01/01/2023 00:00:00)

---

## Executive Summary

Fugro GB (North) Marine Limited (FGBNM) was subcontracted by Fugro GeoServices Limited (FGSL) to provide, install and calibrate surface positioning equipment and software onboard the Excalibur jack-up barge (JUB) whilst alongside Holyhead.

FGBNM provided Excalibur with surface positioning and survey services during operations. FGSL utilised the FGBNM supplied equipment for all operations and positioning.

# 1. Introduction and Scope of Work

## 1.1 Introduction

Fugro was contracted by FGSL to provide positioning support during the geotechnical site investigation for the North Sea 1 offshore wind farm area. The positioning of the barge was supported from the Remote Operations Centre (ROC) in Aberdeen, UK.

## 1.2 Scope of Work Summary

Tasks included (but were not limited to):

- Mobilised personnel and positioning equipment to JUB;
- Conducted risk assessment, toolbox talk, installation and system checks;
- Conducted offset determination using dimensional control techniques;
- Conducted heading alignment checks using a DGNSS validated baseline;
- Configured the position and elevation logging of CRP in Starfix.;
- Configured the MPR;
- Configured logging and monitoring of position quality data (HDOP, PDOP, SD, number of satellites in view, etc.);
- Provided remote support for the positioning;
- Produced final report.

## 1.3 Definitions

Table 1.1: Definitions

Client	Fugro Geoservices Limited
Survey Sub-Contractor	Fugro GB (North) Marine Limited
Project Type	Geotechnical Investigations
Location	Danish sector of the North Sea 1 offshore wind farm area (Subarea1), approximately 20 km off the west coast of Jutland, Denmark
JUB	Excalibur
Coordinates	Geographical coordinates are referenced to ETRS89. Grid coordinates are referenced to Universal Transverse Mercator Projection, Northern Hemisphere with Central Meridian of 09° East. Details of the coordinate systems are described in Table 4.1.
Units	metre

## 1.4 Reference Documentation

### 3. Summary of Events

A series of alongside checks and calibrations were undertaken between 8 and 9 March 2024, while the Excalibur JUB was alongside Holyhead. Refer to report FGBNM-240149-R0 01.

The scope was conducted by Excalibur in Subarea 1, between 28 April and 25 June 2024.

The position of the JUB at each location was recorded by FGSL personnel onboard the JUB.

A 10-minute Mean Position Report was run at each location along with measurement of the deck to mud depth.

## 4. Survey Control

### 4.1 Geodetic Parameters

## 6. Health and Safety

Fugro personnel discussed and conducted job specific risk assessments. All hazards and risks were identified, and control measures discussed and put in place to enable the rig move to be conducted in a safe manner.

Fugro personnel adhered to safety management systems at all times. There were no incidents involving Fugro personnel during the project.

Working hours were planned and controlled in accordance with Fugro procedures, to provide cover as required.

---

## 7. Performance, Conclusions and Recommendations

### General

From a survey positioning perspective, the operations were carried out safely, without incident and in accordance with the positioning requirements.

### Starfix.NG Software and Associated Hardware

All systems performed well, delivering the scope of the project successfully.

### DGNSS Positioning Systems

The primary (SPK1 G4+) and secondary (SPK2 G4+) DGNSS positioning systems performed well throughout the majority of the project with all systems generally showing a correlation of  $\pm 0.20$  m. Good performance was indicated by the low PDOP values (generally  $< 2$ ).

## D.1 Cone Penetrometer Calibration

### List of Plates

Cone Penetrometer Calibration Certificates	50 Plates
--	-----------

# Calibration Certificate

<b>Applicant</b>	Fugro GeoServices Ltd. Fugro House, Hithercroft Road OX10 9RB, Wallingford United Kingdom
------------------	--

**Certificate Number**  
**FCN24032914**

<b>Instrument</b>	Cone Penetrometer
Manufacturer	Fugro
Type	CP10-CF100PB10SN2-P1E1M4-V1
Serial Number	1706-2368

<b>Calibration method</b>	The instrument was calibrated according to Fugro procedures using a comparison technique against a reference standard.
---------------------------	--

<b>Environmental Conditions</b>	
Temperature during calibration	20.5 ± 3 °C
Atmospheric pressure during calibration	1000 ± 100 mbar

<b>Result</b>	The condition of the cone penetrometer meets the requirements of ISO 22476-1:2012 Section 4.1 through 4.7. The calibration results are reported on the next page(s).
---------------	--

The calibration results indicate that the cone penetrometer meets the requirements for use in Application Class 1 as defined in ISO 22476-1:2012 Section 5.2.

<b>Uncertainty</b>	The reported uncertainty is based on a standard uncertainty multiplied by a coverage factor k = 2, which provides a confidence level of approximately 95%. The standard uncertainty has been determined in accordance with EA-4/02.
--------------------	---

<b>Traceability</b>	Fugro reference standards are periodically recertified and are traceable to the International System of Units (SI). Fugro's calibration system meets or exceeds the requirements of ISO 9001:2008, ISO 10012:2003 and ISO/IEC 17025:2017.
---------------------	---

<b>Calibration date</b>	04-Mar-2024
-------------------------	-------------

<b>Calibrate before</b>	04-Mar-2025
-------------------------	-------------

Calibrated Sensor	Manufacturer / Type	Calibrated Range	Maximum Rating	Procedure
Cone [Force]	Fugro Loadcell	0 to 100 kN	0 to 100 kN	EUAF-FNLM- CAL-PR-003
Cone+Fric. [Force]	Fugro Loadcell	0 to 100 kN	0 to 100 kN	EUAF-FNLM- CAL-PR-003
Pore 2 [Pressure]	Keller PA-8/100bar (8467.8)	0 to 10 MPa	0 to 15 MPa	EUAF-FNLM- CAL-PR-004
Slope [Inclination]	ADXL	0 to 15 Deg	0 to 20 Deg	EUAF-FNLM- CAL-PR-005

Calibrated Sensor	Before adjustment		After adjustment		Drift	
	Sensitivity	Zero Load	Sensitivity	Zero Load	Sensitivity	Zero Load
Cone [Force]	25.0 µV/V/kN	-2.42 µV/V	25.0 µV/V/kN	9.87 µV/V	0.02 %	0.49 %
Cone+Fric. [Force]	24.9 µV/V/kN	140 µV/V	24.9 µV/V/kN	158 µV/V	0.19 %	0.71 %
Pore 2 [Pressure]	3.44 mV/V/MPa	158 µV/V	3.44 mV/V/MPa	166 µV/V	0.04 %	0.02 %

Nootdorp, 07-Mar-2024

# Symbols, Definitions and References

Certificate Number  
FCN24032914

## Symbols and Definitions (general)

b	Repeatability error, defined as the maximum difference between the measurements of the instrument at the applied value.
Noise RMS	Signal noise, defined as the quadratic mean when the sensor is not subjected to load.
q	Accuracy error, defined as the difference between the average indicated value by the instrument and the applied value.
Resolution	Smallest change in a quantity being measured that causes a perceptible change in the corresponding indication.
U	The stated uncertainty is that of the average indicated quantity, and includes the entire calibration method, including the reference and calibrated sensor, but excludes the difference between average indicated value by the instrument and the applied value.
v	Reversibility error, defined as the difference between the average indicated value by the instrument at a certain applied value when it was increased and when it was decreased.

## Symbols and Definitions (quantity specific: Q may be substituted for F, P or S, as appropriate)

Q <sub>0</sub>	Zero load offset, instrument output where the specified measured quantity value is zero.
Q <sub>a</sub>	Average indicated quantity value by the instrument.
Q <sub>a,x</sub>	Quantity value indicated by the instrument at measurement x.
Q <sub>c0</sub>	Zero load error, defined as the difference between the average indicated value by the instrument before and after the load cycle has been applied.
Q <sub>w</sub>	Applied reference quantity value.

## Quantities

F	Force
P	Pressure
S	Inclination

# Calibration Certificate

<b>Applicant</b>	Fugro GeoServices Ltd. Fugro House, Hithercroft Road OX10 9RB, Wallingford United Kingdom
------------------	--

**Certificate Number**  
**FCN24032916**

<b>Instrument</b>	Cone Penetrometer
Manufacturer	Fugro
Type	CP10-CF100PB10SN2-P1E1M1-V1
Serial Number	1706-2788

<b>Calibration method</b>	The instrument was calibrated according to Fugro procedures using a comparison technique against a reference standard.
---------------------------	--

<b>Environmental Conditions</b>	
Temperature during calibration	20.5 ± 3 °C
Atmospheric pressure during calibration	1000 ± 100 mbar

<b>Result</b>	The condition of the cone penetrometer meets the requirements of ISO 22476-1:2012 Section 4.1 through 4.7. The calibration results are reported on the next page(s).
---------------	--

The calibration results indicate that the cone penetrometer meets the requirements for use in Application Class 1 as defined in ISO 22476-1:2012 Section 5.2.

<b>Uncertainty</b>	The reported uncertainty is based on a standard uncertainty multiplied by a coverage factor k = 2, which provides a confidence level of approximately 95%. The standard uncertainty has been determined in accordance with EA-4/02.
--------------------	---

<b>Traceability</b>	Fugro reference standards are periodically recertified and are traceable to the International System of Units (SI). Fugro's calibration system meets or exceeds the requirements of ISO 9001:2008, ISO 10012:2003 and ISO/IEC 17025:2017.
---------------------	---

# Slope Calibration Result [Inclination]

Instrument	
Manufacturer	Fugro
Type	CP10-CF100PB10SN2-P 1E1M1-V1
Serial Number	1706-2788
Electronics	9094
Node Type	7001
Hardware Version	6.00
Software Version	8.01

Reference	
Manufacturer	Hoek-O-Mat
Serial Number	2109-0001
Uncertainty	0.6 [Deg]

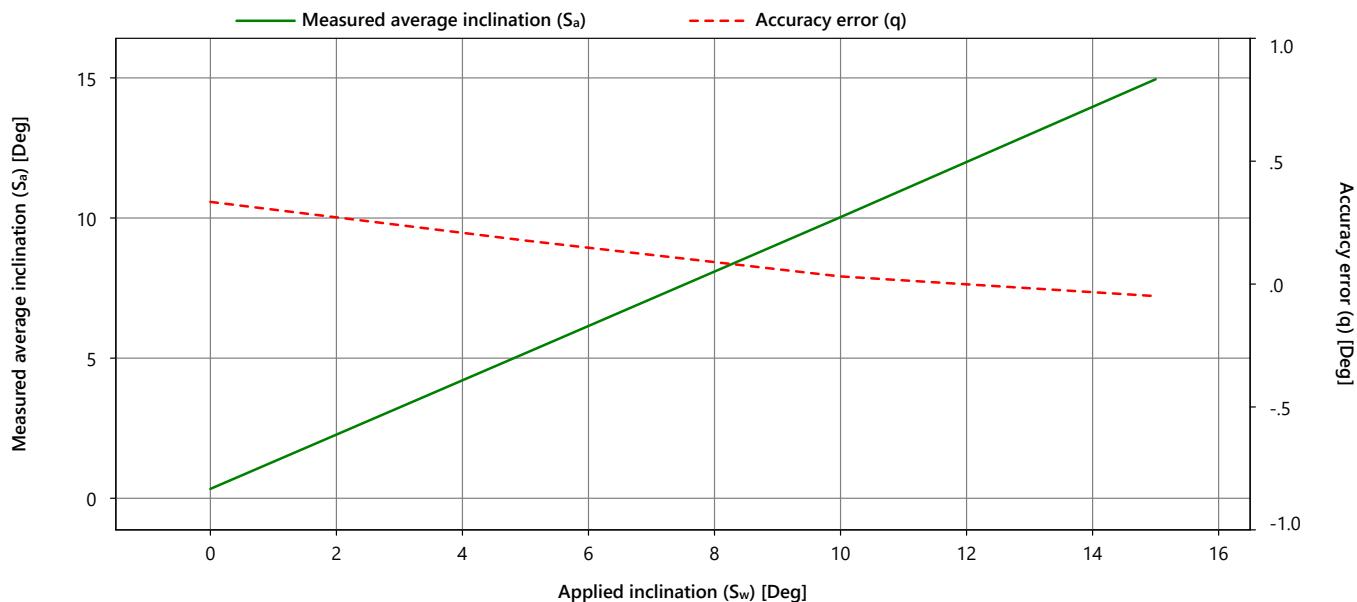

Certificate Number  
**FCN24032916**

Calibration Details	
Calibration Date	04 Mar 2024 08:23:48
Procedure	EUAF-FNLM- CAL-PR-005
Software Version	4.2.0.55751

Sensor	
Channel	Slope [Inclination]
Manufacturer	ADXL
Calibrated Range	0 to 15 Deg
Maximum Rating	0 to 20 Deg

Characteristics	Unit	Value
Max accuracy error ( $q$ )	[Deg]	0.3
Max repeatability error ( $b$ )	[Deg]	0.5
Zero load error ( $S_{c0}$ )	[Deg]	0.0
Zero load offset ( $S_0$ )	[Deg]	0.1
Resolution	[Deg]	1.31E-05
Noise RMS	[Deg]	0.0

Inclination is defined as the angular deviation of the cone penetrometer from the vertical.

Applied inclination ( $S_w$ )	Measured inclination 1 ( $S_{a,1}$ )	Measured inclination 2 ( $S_{a,2}$ )	Measured inclination 3 ( $S_{a,3}$ )	Measured average inclination ( $S_a$ )	Accuracy error ( $q$ )	Repeatability error ( $b$ )	Expanded Uncertainty ( $U$ )

# Symbols, Definitions and References

Certificate Number  
FCN24032916

## Symbols and Definitions (general)

b	Repeatability error, defined as the maximum difference between the measurements of the instrument at the applied value.
Noise RMS	Signal noise, defined as the quadratic mean when the sensor is not subjected to load.
q	Accuracy error, defined as the difference between the average indicated value by the instrument and the applied value.
Resolution	Smallest change in a quantity being measured that causes a perceptible change in the corresponding indication.
U	The stated uncertainty is that of the average indicated quantity, and includes the entire calibration method, including the reference and calibrated sensor, but excludes the difference between average indicated value by the instrument and the applied value.
v	Reversibility error, defined as the difference between the average indicated value by the instrument at a certain applied value when it was increased and when it was decreased.

## Symbols and Definitions (quantity specific: Q may be substituted for F, P or S, as appropriate)

Q <sub>0</sub>	Zero load offset, instrument output where the specified measured quantity value is zero.
Q <sub>a</sub>	Average indicated quantity value by the instrument.
Q <sub>a,x</sub>	Quantity value indicated by the instrument at measurement x.
Q <sub>c0</sub>	Zero load error, defined as the difference between the average indicated value by the instrument before and after the load cycle has been applied.
Q <sub>w</sub>	Applied reference quantity value.

## Quantities

F	Force
P	Pressure
S	Inclination

# Calibration Certificate

<b>Applicant</b>	Fugro GeoServices Ltd. Fugro House, Hithercroft Road OX10 9RB, Wallingford United Kingdom
------------------	--

**Certificate Number**  
**FCN24032918**

<b>Instrument</b>	Cone Penetrometer
Manufacturer	Fugro
Type	CP10-CF100PB10SN2-P1E1M1-V1
Serial Number	1706-2790

<b>Calibration method</b>	The instrument was calibrated according to Fugro procedures using a comparison technique against a reference standard.
---------------------------	--

<b>Environmental Conditions</b>	
Temperature during calibration	20.5 ± 3 °C
Atmospheric pressure during calibration	1000 ± 100 mbar

<b>Result</b>	The condition of the cone penetrometer meets the requirements of ISO 22476-1:2012 Section 4.1 through 4.7. The calibration results are reported on the next page(s).
---------------	--

The calibration results indicate that the cone penetrometer meets the requirements for use in Application Class 1 as defined in ISO 22476-1:2012 Section 5.2.

<b>Uncertainty</b>	The reported uncertainty is based on a standard uncertainty multiplied by a coverage factor k = 2, which provides a confidence level of approximately 95%. The standard uncertainty has been determined in accordance with EA-4/02.
--------------------	---

<b>Traceability</b>	Fugro reference standards are periodically recertified and are traceable to the International System of Units (SI). Fugro's calibration system meets or exceeds the requirements of ISO 9001:2008, ISO 10012:2003 and ISO/IEC 17025:2017.
---------------------	---

<b>Calibration period</b>	04-Mar-2024 through 07-Mar-2024
---------------------------	---------------------------------

<b>Calibrate before</b>	04-Mar-2025

# Symbols, Definitions and References

Certificate Number  
FCN24032918

## Symbols and Definitions (general)

b	Repeatability error, defined as the maximum difference between the measurements of the instrument at the applied value.
Noise RMS	Signal noise, defined as the quadratic mean when the sensor is not subjected to load.
q	Accuracy error, defined as the difference between the average indicated value by the instrument and the applied value.
Resolution	Smallest change in a quantity being measured that causes a perceptible change in the corresponding indication.
U	The stated uncertainty is that of the average indicated quantity, and includes the entire calibration method, including the reference and calibrated sensor, but excludes the difference between average indicated value by the instrument and the applied value.
v	Reversibility error, defined as the difference between the average indicated value by the instrument at a certain applied value when it was increased and when it was decreased.

## Symbols and Definitions (quantity specific: Q may be substituted for F, P or S, as appropriate)

Q <sub>0</sub>	Zero load offset, instrument output where the specified measured quantity value is zero.
Q <sub>a</sub>	Average indicated quantity value by the instrument.
Q <sub>a,x</sub>	Quantity value indicated by the instrument at measurement x.
Q <sub>c0</sub>	Zero load error, defined as the difference between the average indicated value by the instrument before and after the load cycle has been applied.
Q <sub>w</sub>	Applied reference quantity value.

## Quantities

F	Force
P	Pressure
S	Inclination

# Calibration Certificate

<b>Applicant</b>	Fugro GeoServices Ltd. Fugro House, Hithercroft Road OX10 9RB, Wallingford United Kingdom
------------------	--

**Certificate Number**  
**FCN24033175**

<b>Instrument</b>	Cone Penetrometer
Manufacturer	Fugro
Type	CP15-CF200PB10SN2-P1E1M4-V1
Serial Number	1715-0056

<b>Calibration method</b>	The instrument was calibrated according to Fugro procedures using a comparison technique against a reference standard.
---------------------------	--

<b>Environmental Conditions</b>	
Temperature during calibration	20.5 ± 3 °C
Atmospheric pressure during calibration	1000 ± 100 mbar

<b>Result</b>	The condition of the cone penetrometer meets the requirements of ISO 22476-1:2012 Section 4.1 through 4.7. The calibration results are reported on the next page(s).
---------------	--

The calibration results indicate that the cone penetrometer meets the requirements for use in Application Class 1 as defined in ISO 22476-1:2012 Section 5.2.

<b>Uncertainty</b>	The reported uncertainty is based on a standard uncertainty multiplied by a coverage factor k = 2, which provides a confidence level of approximately 95%. The standard uncertainty has been determined in accordance with EA-4/02.
--------------------	---

<b>Traceability</b>	Fugro reference standards are periodically recertified and are traceable to the International System of Units (SI). Fugro's calibration system meets or exceeds the requirements of ISO 9001:2008, ISO 10012:2003 and ISO/IEC 17025:2017.
---------------------	---

<b>Calibration period</b>	26-Mar-2024 through 27-Mar-2024
---------------------------	---------------------------------

<b>Calibrate before</b>	26-Mar-2025

# Slope Calibration Result [Inclination]

Instrument	
Manufacturer	Fugro
Type	CP15-CF200PB10SN2-P 1E1M4-V1
Serial Number	1715-0056
Electronics	234
Node Type	7001
Hardware Version	5.01
Software Version	8.01

Reference	
Manufacturer	Hoek-O-Mat
Serial Number	2109-0002
Uncertainty	0.6 [Deg]

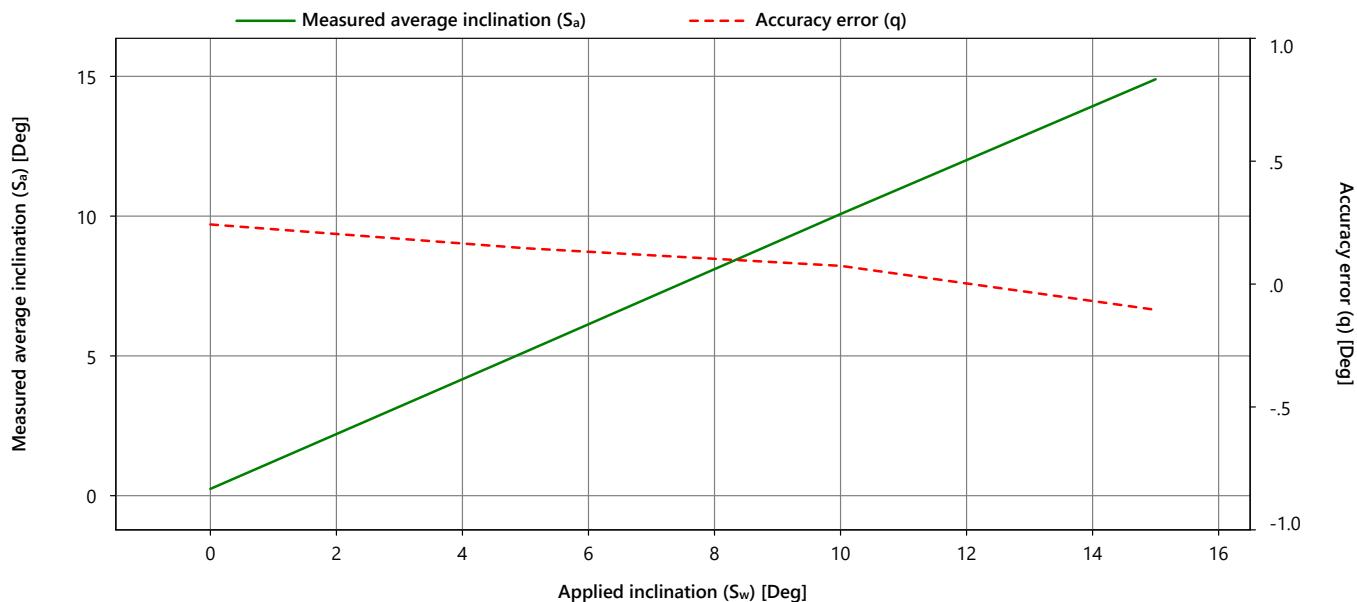

Certificate Number  
**FCN24033175**

Calibration Details	
Calibration Date	26 Mar 2024 11:16:34
Procedure	EUAF-FNLM- CAL-PR-005
Software Version	4.2.0.55751

Sensor	
Channel	Slope [Inclination]
Manufacturer	ADXL
Calibrated Range	0 to 15 Deg
Maximum Rating	0 to 20 Deg

Characteristics	Unit	Value
Max accuracy error ( $q$ )	[Deg]	0.2
Max repeatability error ( $b$ )	[Deg]	0.3
Zero load error ( $S_{c0}$ )	[Deg]	0.0
Zero load offset ( $S_0$ )	[Deg]	0.1
Resolution	[Deg]	1.28E-05
Noise RMS	[Deg]	0.0

Inclination is defined as the angular deviation of the cone penetrometer from the vertical.

Applied inclination ( $S_w$ )	Measured inclination 1 ( $S_{a,1}$ )	Measured inclination 2 ( $S_{a,2}$ )	Measured inclination 3 ( $S_{a,3}$ )	Measured average inclination ( $S_a$ )	Accuracy error ( $q$ )	Repeatability error ( $b$ )	Expanded Uncertainty ( $U$ )

# Symbols, Definitions and References

Certificate Number  
FCN24033175

## Symbols and Definitions (general)

b	Repeatability error, defined as the maximum difference between the measurements of the instrument at the applied value.
Noise RMS	Signal noise, defined as the quadratic mean when the sensor is not subjected to load.
q	Accuracy error, defined as the difference between the average indicated value by the instrument and the applied value.
Resolution	Smallest change in a quantity being measured that causes a perceptible change in the corresponding indication.
U	The stated uncertainty is that of the average indicated quantity, and includes the entire calibration method, including the reference and calibrated sensor, but excludes the difference between average indicated value by the instrument and the applied value.
v	Reversibility error, defined as the difference between the average indicated value by the instrument at a certain applied value when it was increased and when it was decreased.

## Symbols and Definitions (quantity specific: Q may be substituted for F, P or S, as appropriate)

Q <sub>0</sub>	Zero load offset, instrument output where the specified measured quantity value is zero.
Q <sub>a</sub>	Average indicated quantity value by the instrument.
Q <sub>a,x</sub>	Quantity value indicated by the instrument at measurement x.
Q <sub>c0</sub>	Zero load error, defined as the difference between the average indicated value by the instrument before and after the load cycle has been applied.
Q <sub>w</sub>	Applied reference quantity value.

## Quantities

F	Force
P	Pressure
S	Inclination

# Calibration Certificate

<b>Applicant</b>	Fugro GeoServices Ltd. Fugro House, Hithercroft Road OX10 9RB, Wallingford United Kingdom
------------------	--

**Certificate Number**  
**FCN24033179**

<b>Instrument</b>	Cone Penetrometer
Manufacturer	Fugro
Type	CP15-CF200PB10SN2-P1E1M4-V1
Serial Number	1715-0057

Calibration method	The instrument was calibrated according to Fugro procedures using a comparison technique against a reference standard.
--------------------	--

<b>Environmental Conditions</b>	
Temperature during calibration	20.5 ± 3 °C
Atmospheric pressure during calibration	1000 ± 100 mbar

Result	The condition of the cone penetrometer meets the requirements of ISO 22476-1:2012 Section 4.1 through 4.7. The calibration results are reported on the next page(s).
--------	--

The calibration results indicate that the cone penetrometer meets the requirements for use in Application Class 1 as defined in ISO 22476-1:2012 Section 5.2.

Uncertainty	The reported uncertainty is based on a standard uncertainty multiplied by a coverage factor k = 2, which provides a confidence level of approximately 95%. The standard uncertainty has been determined in accordance with EA-4/02.
-------------	---

Traceability	Fugro reference standards are periodically recertified and are traceable to the International System of Units (SI). Fugro's calibration system meets or exceeds the requirements of ISO 9001:2008, ISO 10012:2003 and ISO/IEC 17025:2017.

# Slope Calibration Result [Inclination]

Instrument	
Manufacturer	Fugro
Type	CP15-CF200PB10SN2-P 1E1M4-V1
Serial Number	1715-0057
Electronics	128
Node Type	7001
Hardware Version	5.01
Software Version	8.01

Reference	
Manufacturer	Hoek-O-Mat
Serial Number	2109-0002
Uncertainty	0.6 [Deg]

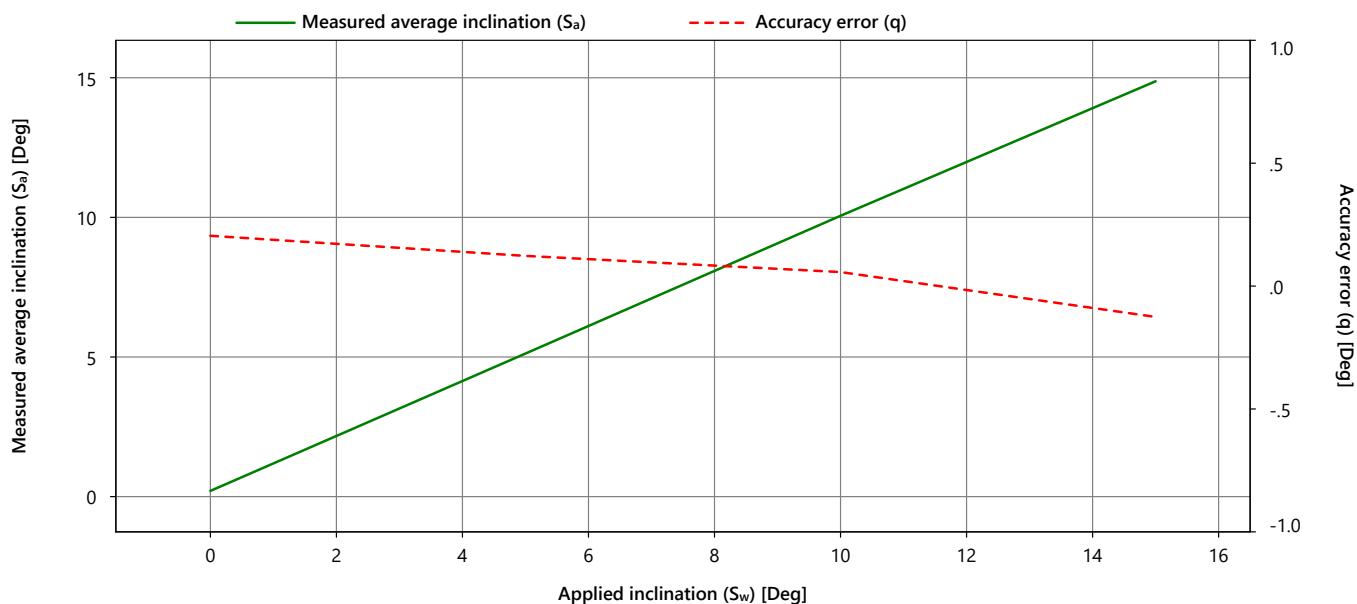

Certificate Number  
**FCN24033179**

Calibration Details	
Calibration Date	27 Mar 2024 06:11:35
Procedure	EUAF-FNLM- CAL-PR-005
Software Version	4.2.0.55751

Sensor	
Channel	Slope [Inclination]
Manufacturer	ADXL
Calibrated Range	0 to 15 Deg
Maximum Rating	0 to 20 Deg

Characteristics	Unit	Value
Max accuracy error ( $q$ )	[Deg]	0.2
Max repeatability error ( $b$ )	[Deg]	0.2
Zero load error ( $S_{c0}$ )	[Deg]	0.0
Zero load offset ( $S_0$ )	[Deg]	0.1
Resolution	[Deg]	1.32E-05
Noise RMS	[Deg]	0.0

Inclination is defined as the angular deviation of the cone penetrometer from the vertical.

Applied inclination ( $S_w$ )	Measured inclination 1 ( $S_{a,1}$ )	Measured inclination 2 ( $S_{a,2}$ )	Measured inclination 3 ( $S_{a,3}$ )	Measured average inclination ( $S_a$ )	Accuracy error ( $q$ )	Repeatability error ( $b$ )	Expanded Uncertainty ( $U$ )
[Deg]	[Deg]	[Deg]	[Deg]	[Deg]	[Deg]	[Deg]	[Deg]
0.0	0.1	0.3	0.2	0.2	0.2	0.2	0.7

# Symbols, Definitions and References

Certificate Number  
FCN24033179

## Symbols and Definitions (general)

b	Repeatability error, defined as the maximum difference between the measurements of the instrument at the applied value.
Noise RMS	Signal noise, defined as the quadratic mean when the sensor is not subjected to load.
q	Accuracy error, defined as the difference between the average indicated value by the instrument and the applied value.
Resolution	Smallest change in a quantity being measured that causes a perceptible change in the corresponding indication.
U	The stated uncertainty is that of the average indicated quantity, and includes the entire calibration method, including the reference and calibrated sensor, but excludes the difference between average indicated value by the instrument and the applied value.
v	Reversibility error, defined as the difference between the average indicated value by the instrument at a certain applied value when it was increased and when it was decreased.

## Symbols and Definitions (quantity specific: Q may be substituted for F, P or S, as appropriate)

Q <sub>0</sub>	Zero load offset, instrument output where the specified measured quantity value is zero.
Q <sub>a</sub>	Average indicated quantity value by the instrument.
Q <sub>a,x</sub>	Quantity value indicated by the instrument at measurement x.
Q <sub>c0</sub>	Zero load error, defined as the difference between the average indicated value by the instrument before and after the load cycle has been applied.
Q <sub>w</sub>	Applied reference quantity value.

## Quantities

F	Force
P	Pressure
S	Inclination

Comments:

Weight Sets Used: N13748 N13576

The weighing equipment described above has been calibrated using weights traceable to National Standards and in accordance with the following procedures (where relevant). The results were recorded.

### LINEARITY

A series of test loads using standard weight, distributed evenly over the normal weighing range were added to the centre of the load receptor. The reading at each load was recorded.

### ECCENTRICITY

A load was placed in the centre of the load receptor and the reading recorded. The load was then placed at each pan support in turn and again in the centre, the readings were recorded.

### REPEATABILITY

The load was applied to the centre of the load receptor and the reading recorded. The load was removed and the reading recorded. This was carried out a minimum of three times.

Results are reported in terms of conventional mass which is the value of the result of weighing in air in accordance with International Document OIML D28.

For a weight taken at 20°C, the conventional mass is the mass of a reference weight of density of 8000kg/m<sup>3</sup> which it balances in air of a density 1.2kg/m<sup>3</sup>.

This certificate provides traceability of measurement to the SI system of units and/or units of measurement realised at the National Physical Laboratory or other recognised national metrology institutes.

This certificate may not be reproduced other than in full, except with the prior written approval of Northern Balance Ltd.

A series of test loads using standard weight, distributed evenly over the normal weighing range were added to the centre of the load receptor. The reading at each load was recorded.

### ECCENTRICITY

A load was placed in the centre of the load receptor and the reading recorded. The load was then placed at each pan support in turn and again in the centre, the readings were recorded.

### REPEATABILITY

The load was applied to the centre of the load receptor and the reading recorded. The load was removed and the reading recorded. This was carried out a minimum of three times.

Results are reported in terms of conventional mass which is the value of the result of weighing in air in accordance with International Document OIML D28.

For a weight taken at 20°C, the conventional mass is the mass of a reference weight of density of 8000kg/m<sup>3</sup> which it balances in air of a density 1.2kg/m<sup>3</sup>.

This certificate provides traceability of measurement to the SI system of units and/or units of measurement realised at the National Physical Laboratory or other recognised national metrology institutes.

This certificate may not be reproduced other than in full, except with the prior written approval of Northern Balance Ltd.

# EQUIPMENT CHECK RECORD - PRESSURE GAUGE

Item Description	Pressure Gauge	Company Identification No	PT13-C
Measurement Range (kPa)	2000	Manufacturer's Serial No	119587
Test Type	UUT	Maintenance Record Ref	N/A
Check Interval	6 months	Reference Standard	DTG1/C
Temperature (Initial/Final) (°C)	19.2	Accuracy Required (kPa)	10
Thermometer Reference	TDT7/C	Method or Procedure	LCM Sec 39

Equipment Utilised					
Type	Reference Gauge	ID	DTG1/C	Calibration Due	26/05/2024

## FINAL FIX REPORT

Project ID: Excalibur\_240149  
Starfix Version: v2022.1110.9 (build 0)  
Client: Fugro Geoservices Inc  
Client Rep: OCR  
Fugro Personnel: James Hills  
Primary Vessel: Excalibur  
Location: UK  
Comment:

Session Name: 20240618-201739-v2  
Start Time: 18 Jun 2024, 21:18:09+01:00  
End Time: 18 Jun 2024, 21:20:08+01:00  
(Session Length 0.033 hrs - No. Obs. 120)

### Position Fix Summary for Excalibur at BH093

#### Moonpool\_1 position computed from SPK1 - Starfix.G4 Plus-10003 (Primary)

Geodetic Datum	European Terrestrial Reference System 1989	International Terrestrial Reference Frame 2014
Latitude	55°53.3852'N	55°53.3855'N
Longitude	07°32.4550'E	07°32.4556'E
Grid System	UTM zone 32N CM 9° E	
Easting	408,744.98m E	
Northing	6,194,771.71m N	
Height	9.04m MSS (DTU21 MSS height)	
Heading	205.07°True (206.28°Grid)	

Position for Moonpool\_1 is 3.43m @ 58.988°True (60.197°Grid) FROM the waypoint.

Moonpool_1 from CRP:	Starboard = 0.00m	Forward = 0.00m	Up = 0.00m
SPK1_Primary from CRP:	Starboard = -13.67m	Forward = 8.65m	Up = 11.73m
Heading correction applied (C-O):	0.00°		
Convergence:	-1.20803°		

#### Waypoint

European Terrestrial Reference System 1989	UTM zone 32N CM 9° E
Latitude: 55°53.3843'N	Easting: 408,742.00m E
Longitude: 07°32.4522'E	Northing: 6,194,770.00m N
Intended Vessel Heading	0.000°True

#### Positioning System Comparison

Sensor	Mean Position UTM zone 32N CM 9° E	Delta Easting	Delta Northing	Delta Height		
		Primary	Secondary	Tertiary	Quaternary	Quinary

# EXCALIBUR\_240149

## FINAL FIX REPORT

Project ID: Excalibur\_240149  
Starfix Version: v2022.1110.9 (build 0)  
Client: Fugro Geoservices Inc  
Client Rep: OCR  
Fugro Personnel:  
Primary Vessel: Excalibur  
Location: UK  
Comment:

Session Name: BH101-v3  
Start Time: 21 Jun 2024, 01:45:03+01:00  
End Time: 21 Jun 2024, 01:55:09+01:00  
(Session Length 0.168 hrs - No. Obs. 607)

### Position Fix Summary for Excalibur at BH101

#### Moonpool\_1 position computed from SPK1 - Starfix.G4 Plus-10003 (Primary)

Geodetic Datum	European Terrestrial Reference System 1989	International Terrestrial Reference Frame 2014
Latitude	55°52.0403'N	55°52.0406'N
Longitude	07°38.9403'E	07°38.9408'E
Grid System	UTM zone 32N CM 9° E	
Easting	415,455.88m E	
Northing	6,192,139.90m N	
Height	7.57m MSS (DTU21 MSS height)	
Heading	138.53°True (139.65°Grid)	

#### Position for Moonpool\_1 is 2.88m @ 90.785°True (91.903°Grid) FROM the waypoint.

Moonpool\_1 from CRP: Starboard = 0.00m Forward = 0.00m Up = 0.00m  
SPK1\_Primary from CRP: Starboard = -13.67m Forward = 8.65m Up = 11.73m  
Heading correction applied (C-O): 0.00°  
Convergence: -1.11813°

#### Waypoint

European Terrestrial Reference System 1989	UTM zone 32N CM 9° E
Latitude: 55°52.0403'N	Easting: 415,453.00m E
Longitude: 07°38.9375'E	Northing: 6,192,140.00m N
Intended Vessel Heading 0.000°True	

#### Positioning System Comparison

Sensor	Mean Position	Delta Easting	Delta Northing	Delta Height
UTM zone 32N CM 9° E				
Primary	415,455.88m E, 6,192,139.90m N, 7.57m MSS	0.00m	0.00m	0.00m
Secondary	415,456.02m E, 6,192,139.76m N, 7.43m MSS	0.14m	-0.14m	-0.13m
Tertiary	415,455.88m E, 6,192,139.90m N, 7.57m MSS	0.00m	0.00m	0.00m
Quaternary	415,455.87m E, 6,192,139.89m N, 7.64m MSS	-0.01m	-0.01m	0.07m
Quinary	415,456.03m E, 6,192,139.72m N, 7.27m MSS	0.16m	-0.18m	-0.30m

David Lloyd

Party Chief

FGBNM (Fugro Great Britain North Marine)

# EXCALIBUR\_240149

## FINAL FIX REPORT

Project ID:	Excalibur_240149
Starfix Version:	v2022.1110.9 (build 0)
Client:	Fugro Geoservices Inc
Client Rep:	OCR
Fugro Personnel:	James Hills
Primary Vessel:	Excalibur
Location:	UK
Comment:	

Session Name: 20240617-180350-v3  
Start Time: 17 Jun 2024, 19:05:07+01:00  
End Time: 17 Jun 2024, 19:07:07+01:00 (Session Length 0.033 hrs - No. Obs. 120)

### Position Fix Summary for Excalibur at BH093

#### Moonpool\_1 position computed from SPK1 - Starfix.G4 Plus-10003 (Primary)

Geodetic Datum	European Terrestrial Reference System 1989	International Terrestrial Reference Frame 2014
Latitude	55°53.3856'N	55°53.3860'N
Longitude	07°32.4522'E	07°32.4527'E
Grid System	UTM zone 32N CM 9° E	
Easting	408,741.99m E	
Northing	6,194,772.56m N	
Height	7.97m MSS (DTU21 MSS height)	
Heading	209.38°True (210.58°Grid)	

#### Position for Moonpool\_1 is 2.56m @ 358.626°True (359.835°Grid) FROM the waypoint.

Moonpool_1 from CRP:	Starboard = 0.00m	Forward = 0.00m	Up = 0.00m
SPK1_Primary from CRP:	Starboard = -13.67m	Forward = 8.65m	Up = 11.73m
Heading correction applied (C-O):	0.00°		
Convergence:	-1.20808°		

#### Waypoint

European Terrestrial Reference System 1989	UTM zone 32N CM 9° E
Latitude: 55°53.3843'N	Easting: 408,742.00m E
Intended Vessel Heading	Northing: 6,194,770.00m N

#### Positioning System Comparison

Sensor	Mean Position	Delta Easting	Delta Northing	Delta Height
UTM zone 32N CM 9° E				
Primary	408,741.99m E, 6,194,772.56m N, 7.97m MSS	0.00m	0.00m	0.00m
Secondary	408,741.98m E, 6,194,772.56m N, 7.72m MSS	-0.01m	0.00m	-0.26m
Tertiary	408,742.02m E, 6,194,772.57m N, 7.98m MSS	0.03m	0.01m	0.00m
Quaternary	408,742.11m E, 6,194,772.50m N, 8.06m MSS	0.12m	-0.06m	0.08m
Quinary	408,742.02m E, 6,194,772.58m N, 7.72m MSS	0.02m	0.02m	-0.25m

# EXCALIBUR\_240149

## FINAL FIX REPORT

Project ID: Excalibur\_240149  
Starfix Version: v2022.1110.9 (build 0)  
Client: Fugro Geoservices Inc  
Client Rep: OCR  
Fugro Personnel: David Lloyd  
Primary Vessel: Excalibur  
Location: UK  
Comment:

Session Name: CPT182-v2  
Start Time: 24 Jun 2024, 19:19:00+01:00  
End Time: 24 Jun 2024, 19:29:07+01:00  
(Session Length 0.169 hrs - No. Obs. 608)

### Position Fix Summary for Excalibur at CPT182

#### Moonpool\_1 position computed from SPK1 - Starfix.G4 Plus-10003 (Primary)

Geodetic Datum	European Terrestrial Reference System 1989	International Terrestrial Reference Frame 2014
Latitude	55°52.9247'N	55°52.9250'N
Longitude	07°33.1451'E	07°33.1456'E
Grid System	UTM zone 32N CM 9° E	
Easting	409,446.31m E	
Northing	6,193,902.38m N	
Height	7.30m MSS (DTU21 MSS height)	
Heading	282.13°True (283.33°Grid)	

#### Position for Moonpool\_1 is 2.48m @ 342.632°True (343.831°Grid) FROM the waypoint.

Moonpool\_1 from CRP: Starboard = 0.00m Forward = 0.00m Up = 0.00m  
SPK1\_Primary from CRP: Starboard = -13.67m Forward = 8.65m Up = 11.73m  
Heading correction applied (C-O): 0.00°  
Convergence: -1.19866°

#### Waypoint

European Terrestrial Reference System 1989	UTM zone 32N CM 9° E
Latitude: 55°52.9234'N	Easting: 409,447.00m E
Longitude: 07°33.1458'E	Northing: 6,193,900.00m N
Intended Vessel Heading 0.000°True	

#### Positioning System Comparison

Sensor	Mean Position	Delta Easting	Delta Northing	Delta Height
UTM zone 32N CM 9° E				
Primary	409,446.31m E, 6,193,902.38m N, 7.30m MSS	0.00m	0.00m	0.00m
Secondary	409,446.30m E, 6,193,902.43m N, 7.14m MSS	-0.01m	0.04m	-0.16m
Tertiary	409,446.29m E, 6,193,902.38m N, 7.29m MSS	-0.02m	-0.01m	-0.01m
Quaternary	409,446.33m E, 6,193,902.30m N, 7.40m MSS	0.02m	-0.09m	0.10m
Quinary	409,446.26m E, 6,193,902.49m N, 7.23m MSS	-0.05m	0.11m	-0.07m

# EXCALIBUR\_240149

## FINAL FIX REPORT

Project ID: Excalibur\_240149  
Starfix Version: v2022.1110.9 (build 0)  
Client: Fugro Geoservices Inc  
Client Rep: OCR  
Fugro Personnel: David Lloyd  
Primary Vessel: Excalibur  
Location: UK  
Comment:

Session Name: CPT251-v1  
Start Time: 25 Jun 2024, 07:26:58+01:00  
End Time: 25 Jun 2024, 07:28:58+01:00  
(Session Length 0.033 hrs - No. Obs. 120)

### Position Fix Summary for Excalibur at CPT251

#### Moonpool\_1 position computed from SPK1 - Starfix.G4 Plus-10003 (Primary)

Geodetic Datum	European Terrestrial Reference System 1989	International Terrestrial Reference Frame 2014
Latitude	55°52.1911'N	55°52.1914'N
Longitude	07°31.7381'E	07°31.7386'E
Grid System	UTM zone 32N CM 9° E	
Easting	407,950.64m E	
Northing	6,192,572.84m N	
Height	7.62m MSS (DTU21 MSS height)	
Heading	225.95°True (227.17°Grid)	

#### Position for Moonpool\_1 is 3.87m @ 41.662°True (42.880°Grid) FROM the waypoint.

Moonpool\_1 from CRP: Starboard = 0.00m Forward = 0.00m Up = 0.00m  
SPK1\_Primary from CRP: Starboard = -13.67m Forward = 8.65m Up = 11.73m  
Heading correction applied (C-O): 0.00°

# EXCALIBUR\_240149

## FINAL FIX REPORT

Project ID:	Excalibur_240149
Starfix Version:	v2022.1110.9 (build 0)
Client:	Fugro Geoservices Inc
Client Rep:	
Fugro Personnel:	
Primary Vessel:	Excalibur
Location:	UK
Comment:	

Session Name: CPT314-v3  
Start Time: 01 May 2024, 19:31:52+01:00  
End Time: 01 May 2024, 19:40:12+01:00  
(Session Length 0.139 hrs - No. Obs. 500)

### Position Fix Summary for Excalibur at CPT314

#### Moonpool\_1 position computed from SPK1 - Starfix.G4 Plus-10003 (Primary)

Geodetic Datum	European Terrestrial Reference System 1989	International Terrestrial Reference Frame 2014
Latitude	55°48.1943'N	55°48.1947'N
Longitude	07°39.3250'E	07°39.3255'E
Grid System	UTM zone 32N CM 9° E	
Easting	415,718.55m E	
Northing	6,184,999.00m N	
Height	8.19m MSS (DTU21 MSS height)	
Heading	156.81°True (157.92°Grid)	

#### Position for Moonpool\_1 is 1.14m @ 150.106°True (151.218°Grid) FROM the proposed location.

Moonpool_1 from CRP:	Starboard = 0.00m	Forward = 0.00m	Up = 0.00m
SPK1_Primary from CRP:	Starboard = -13.67m	Forward = 8.65m	Up = 11.73m
Heading correction applied (C-O):	0.00°		
Convergence:	-1.11198°		

#### Proposed Location

European Terrestrial Reference System 1989	UTM zone 32N CM 9° E
Latitude: 55°48.1949'N	Easting: 415,718.00m E
Intended Vessel Heading	Northing: 6,185,000.00m N

#### Positioning System Comparison

Sensor	Mean Position	Delta Easting	Delta Northing	Delta Height
UTM zone 32N CM 9° E				
Primary	415,718.55m E, 6,184,999.00m N, 8.19m MSS	0.00m	0.00m	0.00m
Secondary	415,718.52m E, 6,184,999.02m N, 8.14m MSS	-0.03m	0.02m	-0.06m
Tertiary	415,718.58m E, 6,184,999.02m N, 8.13m MSS	0.03m	0.02m	-0.06m
Quaternary	415,718.50m E, 6,184,999.04m N, 8.24m MSS	-0.05m	0.04m	0.04m
Quinary	415,718.52m E, 6,184,999.04m N, 8.11m MSS	-0.03m	0.04m	-0.08m

# EXCALIBUR\_240149

## FINAL FIX REPORT

Project ID: Excalibur\_240149  
Starfix Version: v2022.1110.9 (build 0)  
Client: Fugro Geoservices Inc  
Client Rep: OCR  
Fugro Personnel: David Lloyd  
Primary Vessel: Excalibur  
Location: UK  
Comment:

Session Name: CPT400-v1  
Start Time: 24 Jun 2024, 08:19:10+01:00  
End Time: 24 Jun 2024, 08:21:10+01:00  
(Session Length 0.033 hrs - No. Obs. 120)

### Position Fix Summary for Excalibur at CPT400

#### Moonpool\_1 position computed from SPK1 - Starfix.G4 Plus-10003 (Primary)

Geodetic Datum	European Terrestrial Reference System 1989	International Terrestrial Reference Frame 2014
Latitude	55°53.0399'N	55°53.0402'N
Longitude	07°38.0252'E	07°38.0257'E
Grid System	UTM zone 32N CM 9° E	
Easting	414,538.11m E	
Northing	6,194,012.61m N	
Height	7.16m MSS (DTU21 MSS height)	
Heading	311.40°True (312.53°Grid)	

#### Position for Moonpool\_1 is 3.90m @ 310.992°True (312.123°Grid) FROM the waypoint.

Moonpool_1 from CRP:	Starboard = 0.00m	Forward = 0.00m	Up = 0.00m
SPK1_Primary from CRP:	Starboard = -13.67m	Forward = 8.65m	Up = 11.73m
Heading correction applied (C-O):	0.00°		
Convergence:	-1.13139°		

#### Waypoint

European Terrestrial Reference System 1989	UTM zone 32N CM 9° E
Latitude: 55°53.0385'N	Easting: 414,541.00m E
Intended Vessel Heading	Northing: 6,194,010.00m N
0.000°True	

#### Positioning System Comparison

Sensor	Mean Position	Delta Easting	Delta Northing	Delta Height
UTM zone 32N CM 9° E				
Primary	414,538.11m E, 6,194,012.61m N, 7.16m MSS	0.00m	0.00m	0.00m
Secondary	414,538.10m E, 6,194,012.61m N, 7.15m MSS	-0.02m	-0.01m	-0.01m
Tertiary	414,538.10m E, 6,194,012.61m N, 7.15m MSS	-0.01m	0.00m	-0.01m
Quaternary	414,538.07m E, 6,194,012.63m N, 7.06m MSS	-0.04m	0.02m	-0.10m

UTM	Universal Transverse Mercator
WGS 84	World Geodetic System 1984

# 1. Introduction and Scope of Work

## 1.1 Project Description

Fugro GB (North) Marine Limited (FGBNM) was subcontracted by Fugro GeoServices Limited (FGSL) to provide, install and calibrate surface positioning equipment and software onboard the Excalibur jack-up barge (JUB) whilst alongside Holyhead.

FGBNM provided the JUB with surface positioning and survey services during operations. FGSL will utilise the FGBNM supplied equipment for all operations and positioning.

DGNSS positioning used the Fugro Starfix.G4+ solution which met the horizontal and vertical accuracy specification. Heading control was provided by two ProTrack GNSS heading solutions and one mechanical gyro providing redundancy.

Antenna position data was combined with the JUB heading in Starfix navigation software to compute the JUB CRP position. DGNSS derived JUB position, JUB outline, and nearby structures were displayed by the online graphics system, together with their relative position, plus course and speed data if applicable.

Post mobilisation DGNSS and heading verifications were required to prove the JUB positioning system validity.

Connection to ROC was tested and confirmed operational before FGBNM personnel departed the JUB.

The horizontal and vertical uncertainty of the vessel position shall be less than 0.5m. The accuracy of the horizontal positioning shall be better than 0.2m for 95% of time ( $2\sigma$ ).

During the survey operations, the elevation of the seabed at each exploratory hole location shall be recorded at the location and expressed relative to DTU21 MSS.

## 1.2 Scope of Work

The scope of work involving Fugro during the operations was as follows:

- Mobilised personnel and positioning equipment to JUB;
- Conducted risk assessment, toolbox talk, installation and system checks;
- Installed four antennas with two dual card StarPack solution;
- Positioned all antennas such that they performed to an optimum;
- Installed Meridian gyro;
- Installed and tested 4G modem;
- Confirmed with FGSL their preferred vertical reference point (deck level);
- Photographed all equipment installed and compiled JUB information sheet;
- Conducted offset determination using dimensional control techniques:
  - Clearly marked the CRP;
  - Antennas (three dimensions, height to deck level);
  - JUB leg centres.
- Conducted heading alignment checks using a DGNSS validated baseline;
- Configured the position and elevation logging of CRP in Starfix.;
- Configured the MPR;
- Tested 4G modem and confirmed with ROC that connection was established on both navigation PCs;
- Configured logging and monitoring of position quality data (HDOP, PDOP, SD, number of satellites in view, etc.);
- Completed fault logs as necessary;
- Prepared equipment for return;
- Returned data and deliverables to the office (including photographs of CRP, antennas etc.).

## 2. Calibration Results

### 2.1 Alongside Calibration Results

A series of alongside checks and calibrations were undertaken between 8 and 9 March 2024, while the Excalibur JUB was alongside Holyhead.

### 2.2 Vessel Offset Measurement

Offsets of installed GNSS antennas relative to the CRP (Moonpool 1) were measured using total station observations. The zero elevation was set to be the deck level. Refer to Table 2.1 and Figure 2.1 for Excalibur offsets.

Table 2.1: Excalibur Offsets

Description	X [m]	Y [m]	Z [m]	Notes
Moonpool 1 CRP	0.00	0.00	0.00	Common Reference Point, deck level
GNSS Antenna Aft 1	4.63	-18.86	6.83	SPK2 primary, Phase centre
GNSS Antenna Aft 2	2.04	-15.81	6.97	SPK2 secondary, Phase centre
GNSS Antenna Bow Port	-13.67	8.65	11.73	SPK1 primary, Phase centre
GNSS Antenna Bow Starboard	-0.91	8.72	12.01	SPK1 secondary, Phase centre
LEG 1	-20.86	9.94	0.00	Centre
LEG 2	7.04	9.92	0.00	Centre
LEG 3	-20.93	-8.04	0.00	Centre
LEG 4	6.94	-7.96	0.00	Centre
LEG 5	-20.90	-14.53	0.00	Centre
LEG 6	6.97	-14.52	0.00	Centre
LEG 7	-20.96	-37.40	0.00	Centre

Moonpool 2	-2.44	-5.66	-0.03	Centre
Crane 1	-6.81	-19.14	0.00	Centre
Crane 2	-20.46	-0.71	0.00	Centre

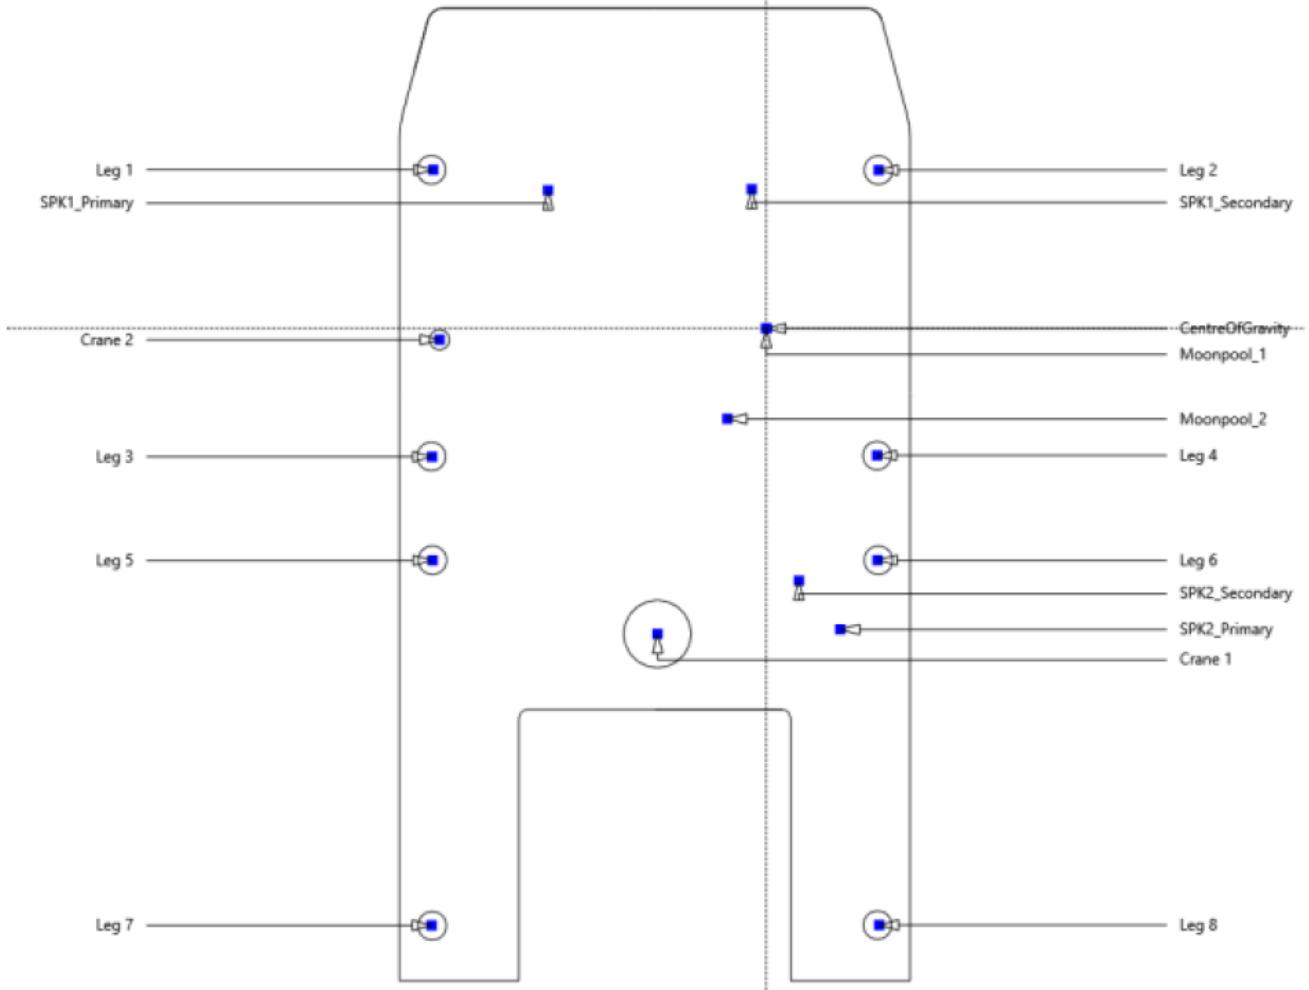

Excalibur

Figure 2.1: Excalibur offset diagram

## 2.3 Heading Sensors Verifications and Calibration

Observations for the heading verifications and calibration were conducted whilst the Excalibur JUB was jacked-up alongside Holyhead. Two DGNSS heading solutions were installed on the JUB. Two coordinated quayside control points were used for the heading verification. Measurements were taken from the total station to targets placed on a straight length of the side of the JUB, which were offset relative to the JUB centreline.

Onboard ProTrack readings were recorded simultaneously with total station measurements. These logged values were then averaged over the logged period (vessel was stable) and compared with the calculated values to determine the average C-O correction. Prior to the onboard data recording, any existing C-Os were removed from the navigation where applicable. Refer to Appendix A for details.

Table 2.2: Vessel Heading Sensor Verification

Solution	Computed [°]		Observed [°]		Mean Difference [°]	
	Mean	SD	Mean	SD	Mean	SD
ProTrack SPK1	211.81	0.01	211.85	0.06	-0.04	0.07

Note: Protrack SPK2 logged data had a higher standard deviation than expected. This can be due to a possible interference from antennas nearby or legs masking. A third heading solution was additionally configured utilising SPK1 primary antenna and SPK2 primary antenna. A gyroscope was also additionally installed to provide more redundancy for heading solutions.

The gyro calibration was conducted by running a two-hour gyro comparison against the primary heading solution SPK1 in the Starfix software. For details see Appendix B.2.

Table 2.3: Gyro calibration

Sensor	Computed [°]		Observed [°]		Mean C-O [°]	
	Mean	SD	Mean	SD	Mean	SD
ProTrack SPK1	211.86	0.04	-	-	-	-
Meridian gyro	-	-	211.14	0.05	+0.71	0.06

## 2.4 Final Vessel Heading System Verification

A comparison of all heading solutions was conducted whilst the Excalibur JUB was jacked-up alongside Holyhead. Heading data was logged simultaneously for one hour. The Fugro ProTrack SPK1 was used as a primary heading and all other heading solutions were compared to it. Refer to Appendix B for details.

Table 2.4: Final Vessel Heading Systems Verification

Heading Solution	Mean [°T]	SD [°]	Difference [°]
GNSS ProTrack SPK1	211.83	0.05	-
Dual GNSS Heading Solution	211.68	0.06	+0.15
Meridian Gyro	211.91	0.00	-0.08
GNSS ProTrack SPK2	211.89	0.18	-0.06

## 2.5 Position Verification

A position verification was completed whilst the Excalibur was jacked-up alongside in Holyhead. Reference position point (MoonPool 2) on the JUB was logged for one hour at a sample rate of 1 Hz using RTK GNSS whilst also the same position was being logged in Starfix using SPK1 antenna and SPK2 antenna. The resulting positions were compared against each other.

An overview of the results from the position verification are listed and shown in the following table.

Table 2.5: Vessel Position Verification Results – from SPK1

Deme Neptune	Easting [m]	Northing [m]	Height [m]	Δ E [m]	Δ N [m]	Δ Ht [m]
Check Point from RTK	391425.37	5908034.31	7.33	-	-	
Check Point from SPK1 G4+	391425.44	5908034.36	7.35	-0.07	-0.05	-0.02

Table 2.6: Vessel Position Verification Results – from SPK2

Deme Neptune	Easting [m]	Northing [m]	Height [m]	Δ E [m]	Δ N [m]	Δ Ht [m]
Check Point from RTK	391425.37	5908034.31	7.33	-	-	
Check Point from SPK2 G4+	391425.33	5908034.36	7.30	+0.04	-0.05	+0.03

## 2.6 Vessel DGNSS CRP Position Comparison

A final comparison check was conducted on the Fugro StarPacks DGNSS CRP position solutions whilst the Excalibur JUB was jacked-up alongside Holyhead.

Positioning data was logged for one hour at a sample rate of 1 Hz. Table 2.7 shows the delta Easting and Northing value of CRP for each position solution compared to the primary solution (G4+ SPK1). The mean deltas are all < 0.15 m which demonstrates a good consistency within project specification for surface positioning systems. Refer to Appendix C for details.

Table 2.7: Excalibur Mean Position at Moonpool\_1 (UTM zone 30N CM -3° W)

System	Easting [m]	Northing [m]	Height [m]	1 x DRMS [m]	Difference [m]		
					Easting	Northing	Height
SPK1- Starfix.G4 Plus	391 420.29	5 908 030.94	7.40	0.03	-	-	-
SPK1- Starfix.G4	391 420.28	5 908 030.95	7.35	0.03	-0.02	0.01	-0.04

SPK2- Starfix.G4	391 420.16	5 908 030.96	7.35	0.03	-0.14	0.02	-0.05
SPK2- Starfix.XP2	391 420.26	5 908 030.96	7.36	0.04	-0.03	0.02	-0.04

### 3. Summary of Events

A summary of operations is listed in Table 3.1:

Table 3.1: Summary of Events

Date		Task
Start	End	
08/03/2024	09/03/2024	Vessel safety familiarisation and project briefing. Commence mobilisation. JUB offsets by dimensional control survey. Calibrations and verifications. Demobilisation of personnel.

Refer to Appendix D for daily progress reports.

## 4. Survey Control

### 4.1 Geodetic Parameters

The calibration/verification CRS is based on ETRS89 UTM 30N.

Table 4.1: Geodetic Parameters

Name: ETRS89 / UTM zone 30N [ETRF2000-ITRF2014][2024.250254], DTU21 MSS height [DTU21 MSS]

## 6. General Safety

Upon arrival on the Excalibur JUB all personnel underwent an induction briefing, carried out by a member of the marine crew, addressing the primary safety issues surrounding the JUB. Following the completion of the initial briefing, a safety tour on the JUB was taken to show and indicate the safety features. In addition, various meetings were held with members from both the marine and survey crew to define the project and general offshore operations.

### 6.1 Protective Clothing

All Fugro personnel carry the following protective clothing:

- Hard hat;
- Safety boots;
- Safety glasses;
- Coveralls;
- Gloves.

### 6.2 Documentation

All Fugro personnel were in possession of the following MLC2006 compliant documentation:

- Current passport;
- OGUK/Norwegian approved offshore medical certificate;
- Vaccination booklet;
- Current employment contract;
- Recent pay slip;
- Current curriculum vitae (CV);
- Certificate of employer's liability insurance;
- Minimum Industry Safety Training (MIST) certificate.

A project specific emergency response document was issued to the JUB at mobilisation.

### 6.3 Hazardous Operations

During the JUB mobilisation and calibration all safety procedures were adhered to.

### 6.4 Toolbox Meetings

Toolbox meetings are a regular feature of the safety culture onboard. Task specific toolbox talks were conducted before a new or specific project task taking place.

## CRP Position and Heading Comparison Check

## C.1 DGNSS CRP Position and Heading Check

Session name	20240319-132223_NAV1-v2
Units and Format	Local grid (World Standard)
Start Time	19 Mar 2024, 13:26:23+00:00
End Time	19 Mar 2024, 14:26:22+00:00
Duration	59m 59s
Number of Observations	3599

Table 3: Positioning system CRS and offsets

	System	CRS	X [m]	Y [m]	Z [m]
1	SPK1-Starfix.G4 Plus 10003	WGS 84(2D)	-13.67	8.65	11.73
2	SPK1-Starfix.G4 10001	WGS 84(2D)	-13.67	8.65	11.73

## Photos

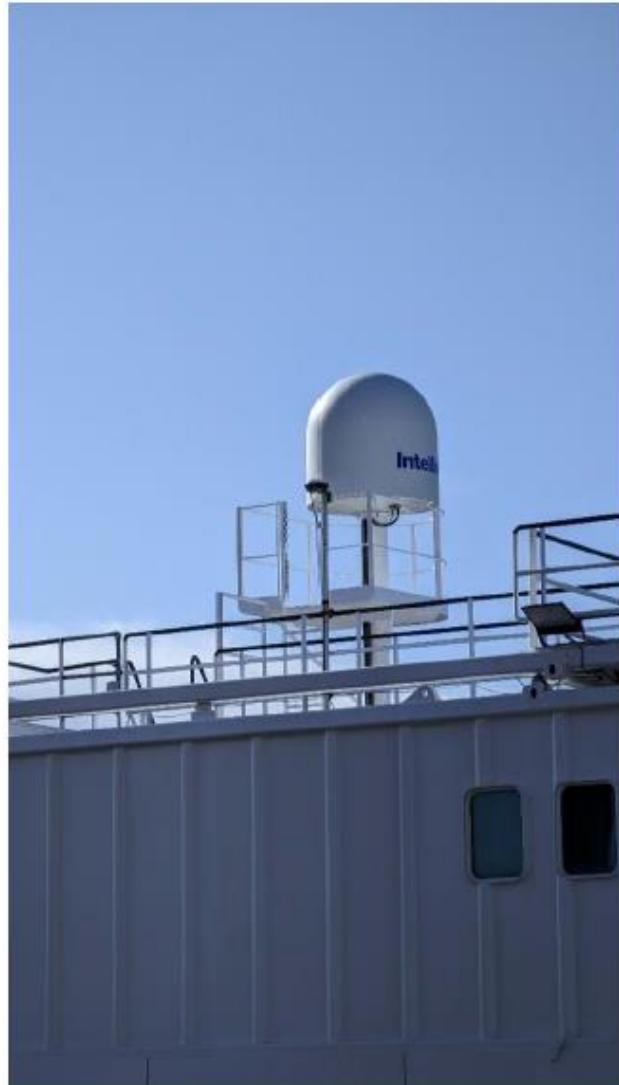

## D.1 Excalibur Photos

Excalibur Moonpool 1

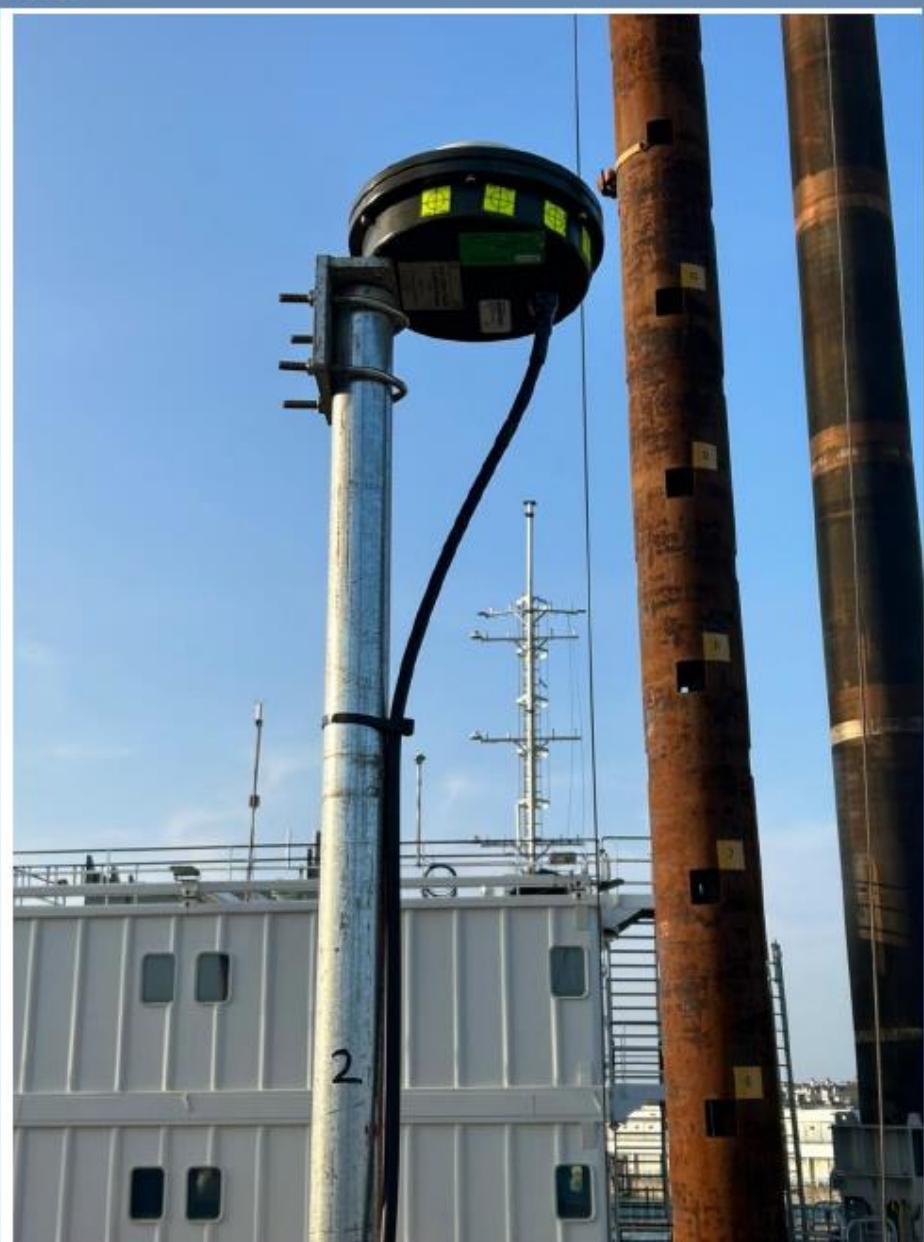

Excalibur Moonpool 2

Location	Photo
FWD Antenna Overview (Looking FWD from pilothouse)	 A wide-angle photograph showing the front deck of a ship. In the center is a large white superstructure with multiple windows. Two tall, brown cylindrical chimneys stand on either side of the superstructure. The deck is green and has several shipping containers (blue, red, and white) stacked. In the background, other ships and industrial buildings are visible under a blue sky with some clouds.
Primary GPS (Port FWD)	 A close-up photograph of a white satellite dish antenna mounted on a metal pole. The dish is pointed upwards. The word "Intel" is printed in blue on the top of the dish. The antenna is mounted on a dark grey metal structure, likely the side of a ship's superstructure. The background is a clear blue sky.

Location	Photo
Secondary GPS (Stbd FWD)	

Location	Photo
<p>AFT Antenna_SPK02_Primary Overview (View looking AFT)</p>	

Location	Photo
AFT Antenna_SPK02_Secondary Overview (View looking FWD)	 A photograph showing a black, circular antenna mounted on a vertical metal pole. The antenna has several small green lights visible through its housing. The pole is positioned next to a large, dark, cylindrical pipe. In the background, there are several white shipping containers stacked together, and a tall metal lattice tower. The sky is clear and blue.

## Sequence of Events

## E.1 Sequence of Events

Date	Time	Description
<b>04/03/24</b>	8:30	S. Singh and S. Ewing arrive Excalibur
		Vessel and safety induction, JUB familiarisation.
		Equipment shipment delayed, arrived in the evening.
<b>05/03/24</b>	08:30	Located equipment, mobilisation commenced.
<b>06/03/24</b>		Mobilisation continued.
<b>07/03/24</b>		Mobilisation continued.
		All mobilised, ready for dimcon survey and verifications.
<b>08/03/24</b>	8:30	B. Bobkowski arrives Excalibur
	9:30	Safety induction
	10:00	Checking survey equipment
	10:30	Familiarise with Excalibur and old Dimcon control left in April 2023
	12:30	Dimcon Survey 4 antennas, Moonpool 1 and 2, crane centre line position. Using Survey Control 2023. Moonpool 2 and crane centre lines match with the Survey 2023. All the survey was shifted to the new Moonpool 1 Centre (CRP)
	17:00	Setting up Trimble GNSS antennas on two control points, quay side for a 6 minutes RTK reading
	18:30	Job paused
<b>09/03/24</b>	08:00	Fugro team arrive Excalibur
	09:30	Heading verification from quayside
	12:30	Heading verification complete for Starpack 1 and 2, data sent to onshore for quality check
	17:30	Fugro team depart Excalibur.
